

# USER GUIDE

LEATHER MILK

**AUTO**

**REFRESHNER NO. 4**

## WHAT YOU NEED

### BEFORE YOU START MAKE SURE YOU ARE PREPARED

---

- Make sure your leather item is dry, clean and free of dust, dirt or grease before using the Leather Milk Auto Refreshener No. 4.
- Test the solution on a small, discreet area of your leather, even if you have applied Leather Milk No. 4 to other auto leather with great success. Each piece of leather can react differently to a solution.
- Treat the auto leather in an outdoor or well-ventilated environment. Avoid exposure to direct sunlight.

## METHOD

**1**

Pour the conditioner onto the applicator pad and gently massage the conditioner evenly across leather surface. Uneven spread may lead to splotchy dry.

---

**2**

When done, leave it to dry naturally. Do not apply heat or speed-drying.

---

**3**

Buff off any excess or remaining conditioner. For best results, allow your leather article to dry overnight.

## PRECAUTIONARY NOTE

---

- Although this solution contains UV protectors, it does not mean the leather auto should be exposed under the sun for drying.
- Keep the Leather Milk solution out of reach of children and away from extreme temperature.
- Do not allow the solution to get into the eyes or be consumed internally.
- Do not use your treated item until it is totally dry to avoid any possibility of skin irritation or stain on your skin or clothing.
- Always wash your hands with soap and water after use and before touching eyes or consuming food with your hands.
- Do not use this conditioner on naked leather, nubuck, suede or untreated leather. Do not use this product if you have nut-allergy.

# REMEMBER

**1** Always conduct a patch test on an inconspicuous area of your item to ensure that the product is suitable for use before proceeding further. It is especially important to test any leather treatment before using it on vegetable tanned, aniline, semi-aniline, or lighter colored leathers.

---

**2** The surface of the treated item may look darker when you first treated it. It should lighten up when it is completely dry.

---

**3** Read the manufacturer's tags or instructions before applying any treatment or solution to your item to ensure maximum protection and adherence.
