# Characteristics

**NEXEN**

for Forklift trucks and Special Vehicles

INDUSTRIAL SOLID TIRES

## Improved Traction

Horizontal Grooves on Tread provide powerful driving and prompt brake.

Bi-directional Wave Figures have you experience better steering.

## Greater Volume

Deeper & Optimized Volume of tread part makes efficient management of the vehicle possible to give longer service life.

## Good Stability

2 Longitudinal Grooves maintain good stability. By reducing distortion of the tires in cornering, they make stable driving possible.

## Low Resistance

NEXEN SOLIDPRO has low rolling resistance with the characteristics of lower energy consumption, heat build-up and CO<sup>2</sup> emission. It helps reducing fuel consumption.

## Smooth Driving

Central Zigzag Groove widens the contact surfaces preventing slip.

The Central Part which rolls on the ground as the vehicles move provides you with more smooth driving.

## Unique Profile

Round-shaped Edges & Blocks on the tread sidewall relieve the damage while reducing the heat build-up by expanding the air-contact surfaces.

## DESIGN

Best Solution for Forklift

## ADVANCED & ATTRACTIVE DESIGN

### Easy Recognition of Product Details

NEXEN SOLIDPRO that NEXEN logo and size are marked on its tread is easy to find out its brand and sizes. They also make users easily recognize whether it is a new product even when they are stacked together.

And also, enlarged description on the sidewall helps easy to find out the details of the tire.
