OPERATING INSTRUCTIONS

Before using the air cooler make sure that it is on a flat and stable surface. Damage may occur if it is placed on an incline.

- Set all switches to OFF position, then insert the plug directly into a standard AC socket outlet. Be sure plug fits tightly into outlet.

POWER ON/OFF: Turns the air cooler power ON/OFF.

- Press the ON/OFF button. The device starts operating.
- Press ON/OFF again and the device will stop working.

MODE: Press to choose from 3 different breeze patterns:

- Normal: A continuous wind
- Natural: Nature Setting
- Sleep: Natural Wind Mode

SPEED MODE: When the wind speed is high, after running for 30 minutes in the high speed of natural wind, it will automatically switch to the medium speed, after 30 minutes then switch to low speed.

SPEED: Press to choose from 3 different breeze speeds:

- High
- Medium
- Low

TIMER: Press the timer button to activate the timer function. Each time the button is pressed the timer will be increased by 1 hour up to a maximum of 12 hours.

SWING: Press the swing button to activate the vertical louvers oscillation. Press again to stop the oscillation.

COOL: Press to activate the air cooling feature, reducing the surrounding air's temperature.

NOTE: The water tank must not be removed while the air cooling feature is activated.

COOLING MODE

For the cooling mode to function, the water tanks requires filling, and the ice packs freezing for enhanced cooling. Ensure fresh water is added to the water tank prior to every use.

ICE PACKS

- Add clean water to the ice packs and fill two thirds of the way.
- Put the ice packs into the freezer until completely frozen.
- Open the top cover and place the frozen ice packs into the compartment for enhanced cooling.

NOTE: The air cooler is supplied with two ice packs, the cooling effect can last for approximately four hours.

FILLING THE WATER TANK

- Turn off the air cooler and unplug from the power socket.
- Turn the water tank locking clip clockwise 90 degrees and gently pull the water tank out until it stops.
- Fill the water tank with fresh water to the maximum water level.
- Carefully push the water tank back into position and turn the water tank locking clip anti clockwise 90 degrees to secure the tank.

EMPTYING THE WATER TANK

- Turn off the air cooler and unplug from the power socket.
- Place the air cooler in a sink, bath tub or over a drain.
- Turn the water tank locking clip clockwise 90 degrees and gently pull the water tank out until it stops.
- Remove the plug located in the bottom of the water tank and drain.
- Reinsert the plug into the water tank and push the water tank back into position and turn the water tank locking clip anti clockwise 90 degrees to secure the tank.
