

**PrintGuardPlus®** is the #1 replacement transfer cylinder jacket for Heidelberg presses in the world. The cross linked orange silicone coating reduces the surface energy of the PrintGuard® glass beaded surface. This means that ink will not stick to the orange surface. Less ink attraction makes for less marking which means more profit. The patented foam backing provides a compressible resilient layer that ensures the surface of the glass beads lay perfectly flat and uniform across the entire cylinder. The foam backing also means that no packing is required. For proper care, inspect daily and clean as required with a good quality, lint free cloth and mild water based/miscible press wash diluted 50% with water.

**PrintGuard® Packaging** designed for printers who print mainly heavier paper/board stocks. Uses all the benefits of the PrintGuardPlus® Orange surface but instead of the foam backing, this product is designed with a thinner, durable fabric backing enabling the press to print thicker paper stocks mark free. The jackets are manufactured utilizing a larger glass bead matrix, with the premium Orange ink repellent coating for a slightly coarser feel, providing a better support for printing heavier stocks. No packing is required and care/cleaning is the same as the PrintGuardPlus® Jackets.

**PrintGuard® Regular** positioned to compete with and outperform all other brands in the market place. Without the patented features of PrintGuardPlus®, this product is manufactured with a new improved yellow bead film and fabric backing. No packing is required and care/cleaning is the same as the PrintGuardPlus® Jackets.

## Product Care & Maintenance

For longest product life, inspect daily – if clean leave alone; Else:

1. Use an absorbent, lint free cleaning cloth or a good quality Cotton shop cloth.
2. Use a mild water based/miscible press wash diluted 50% with water.
3. Moisten above Cleaning Cloth with diluted solution, and use uniform light pressure to remove wet ink.
