Compogreen Vario is an easy-to-assemble composter consisting of modules, which takes little time and requires no tools to assemble. The upper module is equipped with a large opening for pouring in organic waste, which is closed with a lid secured with a special padlock (included) against being opened by the wind or animals. The lower module contains two bolts for convenient removal of compost. All the modules are equipped with a large number of openings to ensure adequate air supply for proper decomposition of organic matter. The bottom element of the composter is stabilized on the ground with 4 pegs. The pegs and the padlock are attached to the underside of the cover for the duration of the sale. Module Compogreen is made from high-quality plastic resistant to mechanical damage, low and high temperatures, as well as UV radiation. Neutral colours and simple shapes make the composter blend into the garden landscape and do not disturb the home space. By producing rainwater tanks and composters, we support activities that contribute to environmental protection. We use recycled plastic and all of our products are 100% recyclable.
