Thank you for your purchase!

When I got my truck, I wanted to be able to show a bit of personality to make it mine. Now, I can share that with you! The best part is that you can easily show your style, and even change it the next time you go for a drive! We offer a full array of color and even personal design options, so I hope that you found one (or more) that suits your style! We'd love to see your truck! Please post a picture on Instagram, Facebook, X, and tag us in the photo!

F-150 Flex Cover Installation Instructions

- ~~1. Throw this away.~~
- ~~2. Just kidding, but that's what I always do! Hopefully these items are easy enough that instructions won't be necessary, but I want everyone to have an amazing experience!~~
1. Ensure that you have the opening (seam) side pointed to the ground. It will install with the seam up, but it gives a better look with the seam hidden.

2. Open the seam on either end, and slide over that same side of the tow hook.

3. Once you have that side around the hook, carefully run your finger along the seam to work it over the rounded part of the tow hook.

4. The hard part is done, finish positioning the opposite side so that it properly wraps around the hook.

5. Finally, check that the boot (the black rubbery part that the tow hook goes through) was not disturbed by this process. If need be, adjust the boot back into position.

6. You're done! Enjoy riding around in style!
