## CONTROLS

**Rate:** Sets how fast or slow the LFO is oscillating. A lower rate gives a gentle wavering texture, while a higher rate gives a rapid pulsating effect.

**Depth:** Controls the strength of the tremolo effect. Move the slider to the left for subtle tremolo or to the right for maximum chop.

**Volume:** Controls the overall output volume of the pedal.

# WAVE SHAPES

**Sine:** Sine gradually adds and decreases volume smoothly for a easy and subtle tremolo.

**Square:** Much more pronounced than sine, square wave has a more on-off pattern.

**Random:** Uses sample and hold that picks new random values at an interval set by the rate control.
