

TUFTEX® Universal Ridge™

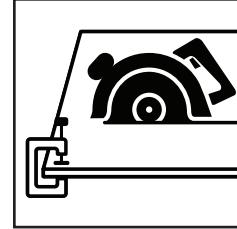

51" x 18" Installation Instructions

TUFTEX® Universal Ridge™ was developed to be used with both TUFTEX® PolyCarb™ panels and TUFTEX® Multi-Wall™ panels. Because projects and structures can vary greatly in design and slope, the Universal Ridge can be trimmed along the sides to create the perfect width for your project. Fastening guidelines are shown as minimums or maximums to allow you to fasten the ridge according to your project specifications.

Cutting Ridges

Always wear appropriate protective equipment and follow manufacture's directions when operating power equipment or any other tool

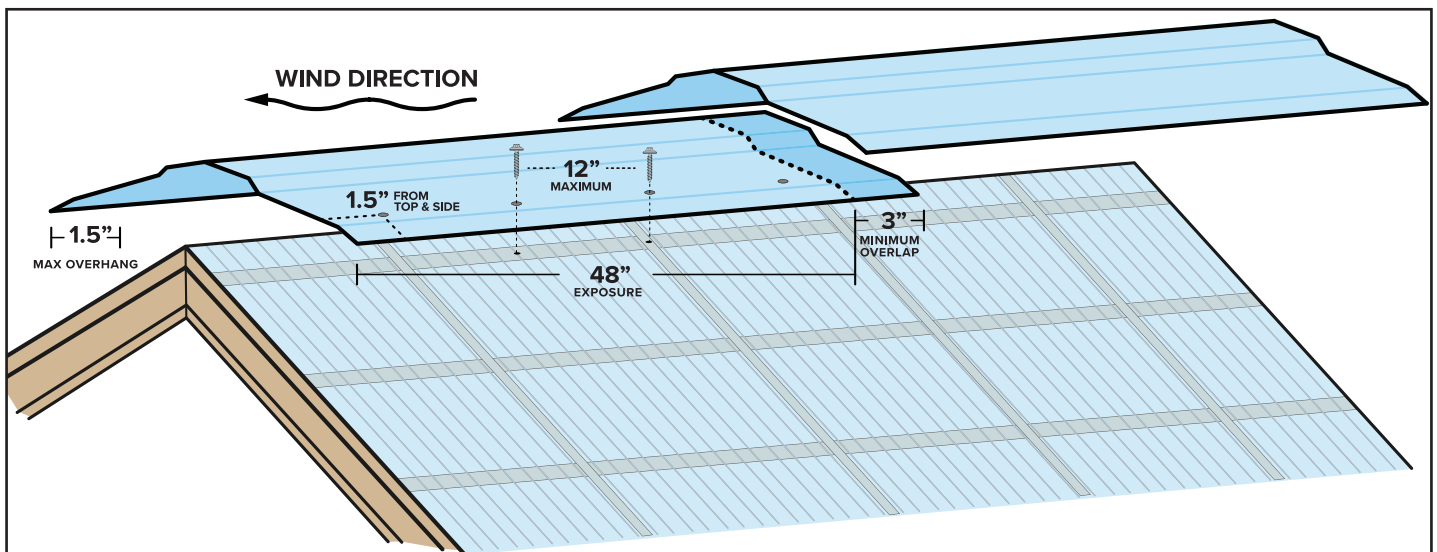

- Sheets should **always** be clamped down firmly to reduce vibration
- Cut with a fine-toothed table saw or circular saw (80+ teeth) with a double sided and certified for plastic cutting blade
- **Cuts should be done at a high RPM moving slowly down or across the sheet**

Installing Ridge

- Align TUFTEX® Universal Ridge™ piece with ridge of structure. Pre-Drill Fastener holes in both the Ridge piece and the TUFTEX panel
- Ensure fastening aligns with support structure. **DO NOT FASTEN RIDGE TO PANELS ONLY**
- **If using TUFTEX® 2" Fasteners use 9/32" bit to pre-drill all fasteners holes**
- If using other fastener, predrill all fastening holes 1/16"-2/16" larger than fastener
- Position fasteners no more than 1.5" from edge of ridge panel
- **DO NOT** over tighten fasteners
- Fasten no less than 2" from edge of underlying TUFTEX® Multi-Wall™ or PolyCarb™ panel
- No more than 12" between fasteners
- Maximum overhang is 1.5"

Care & Maintenance

The use of harsh tools or certain chemicals could cause abrasions to the surface of polycarbonate sheets

- Apply warm water to the surface of the polycarbonate
- Wipe with any soft cloth, and warm soapy water
- Rinse off and use paper towels or any soft cloth to dry the sheet off.
