Transplant

A comprehensive mix of products to ensure lower stress and increased growth in transplants before moving to a stronger formula after plants are established.

Growth

A concentrated formulation for aggressive feeders and larger plants.

Pre-Flowering

Specific to the critical stage where plants are in the process of switching their energy focus. A high-powered formula to ensure the plant is properly supplied with nutrients for the development of flowers and fruit.

Important:

Start using Bud Fuel Pro 10 days before flowering cycle. All feed charts should be considered as a guideline for product use. Genetics and environmental conditions are very important to consider.

Varieties:

56 Days: Add Final Flush and water during week 8.
63 Days: Repeat week 7 and add Final Flush and water in week 9.
70 Days: Repeat week 7 twice and add Final Flush and water in week 10.
