

Mount the magnets to your vehicle with the screws provided, making sure they are secure. If the existing holes are too big, drill them out and insert a plastic plug before installing. If you're mounting the magnets directly on a painted surface, use a spacer to prevent the metal cup from touching the paint and causing damage.

Install the metal cups over the magnets and check they are secure.

Peel the backing off the adhesive pads and firmly press the license plate into place. First, make sure the surface you're applying it to is clean and dry.
