

Bio-Based Lubricants..."The New Normal"

The Kline Group, an energy market research firm, recently published ["Meet the New Normal: Bio-Based Lubricants to Become More Prevalent in the Coming Years"](#). BioBlend has known for years that lubricants formulated with environmentally safe base stocks and additives offer our customers a number of benefits over traditional petroleum based lubricants. We're excited to see them finally getting the attention they deserve from respected industry sources.

Kline points out that while government regulation has helped spur the growth in our market, the emergence of high performance basestocks has also played an important role in the process. At BioBlend, we pride ourselves on being at the leading edge of these evolving technologies and providing the technical support

and high performing sustainable products our customers want and need. Bio-based lubricants have been the focus of our business since 2001. We are the bio-based lubricant experts.

Whether you're a longtime advocate or completely new to the benefits and advantages of biodegradable lubricants, BioBlend is here to help. Give us a [call](#) today!

BioGrease M3: Our Newest EAL

BioBlend continues to meet the needs of our marine segment customers through the development of [BioGrease M3](#). It is an Environmentally Acceptable Lubricant (EAL) grease solution for use on trunnions, open gears, dredging spud rails and other marine applications. [BioGrease M3](#) is formulated with environmentally friendly anti-wear and rust protection additives. It provides equipment protection in service and for extended periods when equipment is in storage. [BioGrease M3](#) uses an optimized blend of polymers that enable the product to function at temperatures well above the limits of other vegetable based products, while also improving water resistance, pumpability and adhesion to lubricated surfaces.

For additional information on BioGrease M3, [please visit our website](#).

BioBlend Engine Oil

We look forward to the continued growth of the bio-based engine oil market segment in 2017. BioBlend Engine Oils are renewable, synthetic passenger car motor oils offering customers up to a 2.6% fuel economy savings. They fit into the existing supply chain, offer drop-in compatibility, and are the first renewable engine oils to achieve full American Petroleum Institute (API) SN approval. BioBlend Engine Oils are also a part of the USDA BioPreferred Program.

For more information on the exciting work we have done with our engine oils at the US Department of Defense, click [here](#).
