

VEEDVERKS STARTER KIT | BATTERY OPERATION GUIDE

Your battery is packaged in **OFF** mode. You should store your battery in **OFF** mode when not in use.

OFF

Tap the tip opposite the mouthpiece five times quickly. The tip will light up one of these three colors for one full second, indicating the current voltage setting. The battery is now in **READY** mode. This means it is ready for any of the five actions to the right.

READ

INHALE

+ 1 TAP/ HOLD Inhaling will activate the heater, vaporizing the oil. To receive a full dose, inhale until the tip flashes, about six or seven seconds.

Touching the tip once will indicate how much of a charge the battery has. Green means fully charged, yellow means half charge, and red means it's time to recharge. Touching the tip once is also how you can tell if the battery is in READY or OFF mode. If it doesn't light up at all, the battery is OFF.

Tapping three times on the tip will change the voltage level. Teal is the lowest voltage, producing more flavor. Purple, the highest level, produces a larger dose.

PREHEAT mode is for thicker oils. Veedverks oils do not need to be preheated. If the light begins cycling through all the colors, just tap the tip once to exit **PREHEAT** mode. Otherwise, the battery will stop preheating after 30 seconds.

The current voltage setting will flash for a split second, and the battery will return to **OFF** mode.
