If your set-up doesn’t include an Auto-EQ feature, adjust the subwoofer volume control to level-match to your loudspeakers.

For additional guidance on recommended crossover settings, visit our Merlin Subwoofer Matching tool at www.svsound.com/merlin, or contact our Sound Experts.

Congratulations on choosing the SVS PB-4000, one of the most powerful and advanced subwoofers available. We know you’re anxious to get it cranking so the following the steps will guide you through the quick and easy installation process.

We strongly recommend reading the PB-4000 Owner’s Manual to get the best possible performance out of your new subwoofer. You’ll find useful information about subwoofer placement, connections, DSP functions and more. The full SVS PB-4000 Owner’s Manual can be found here: www.svsound.com/pb-4000-manual

If you followed the PB-4000 Subwoofer unboxing instructions properly you will have the following items in front of you. Please confirm all pieces are available before continuing.
For most set-ups, a single RCA subwoofer interconnect cable running from the AV Receiver’s “SUB 1” output to the PB-4000’s “LFE” line level input is all that’s required to connect the subwoofer into your system. If you run separate Preamplifier and Power Amplifiers, follow the “Line Level Connection – Stereo Receiver or Preamplifier Left/Right Channels” connection guide below.

Corner Placement: offers huge impact and reduces the potential to encounter bass nulls, or ‘dead spots’. If “boominess” occurs, you can try pulling it away from the wall and using the DSP tuning controls to smooth performance.

Front Placement: In between or to the side of the front channel speakers often results in the best blending with the main speakers and center channel and minimizes localization effects.

Side Wall Placement: Side wall placement is less frequently used but can be an effective subwoofer location for excellent accuracy and output.

Our Sound Experts are standing by to help with subwoofer placement, installation, calibration, AV receiver settings, room rattle and anything else you need advice about. Just call, email or chat online with our Sound Experts:
