Storage and Shelf Life

For optimal results, product should be shipped and stored at ambient temperature (between 50 and 80 degrees Fahrenheit). Temperatures above these thresholds may hasten oil separation.

Cold storage is acceptable, but keep above 40 degrees F to prevent freezing. Freezing may permanently change texture and hasten oil separation. Condensation during and after cold storage may cause moisture damage to product label.

Product shelf-life is 2 years from date of manufacture. Minimum of 1 year shelf life is guaranteed upon first shipment from our distribution center.
