

APPLICATION: The Suspension Trauma Safety Strap in combination with a full body harness is meant to prolong suspension time for a person who has experienced a fall from height. Use only after fall arrest or for training.

TRAINING: The user and purchaser of this equipment must be trained in its proper use and care. They must be familiar with the equipment's operating characteristics, application limits and consequences of improper use.

RESCUE: The employer is responsible for a post fall rescue plan and the means available to execute the plan.

INSPECTION: During daily harness inspections, review the suspension strap assembly and harness connecting points. Check for damage, wear, fraying, cuts, abrasion, burns, discoloration and knots. Verify one cover is marked HOOK and the other LOOP. If inspection reveals a defective condition, remove the unit from service and destroy.

WARNINGS:

1. Maintain an upright position following suspension. Do not lay down. Seek immediate medical attention.
2. This product is only part of a fall arrest system. Alteration or misuse of the product or failure to follow instructions provided by the manufacturer may result in injury or death.
3. Never expose a user to a fall during training exercises.

LOCATION:

Install the suspension safety trauma strap where the shoulder and leg straps intersect on the harness.

INSTALLATION

Pass the case strap through the harness loop which contains the leg strap.

Pass the case through the case strap and choke it down on the harness loop.

Wrap the tabs around one of the harness straps and connect the the snaps to hold the case in place.

INSTALLATION

Repeat for the opposite case on the opposite shoulder strap. Verify one case is marked HOOK and the other LOOP.

USE

Raise the ends of the straps to locate the hook and loops. Insert the hook into an appropriate loop and lower the strap.
