LVT Global Warming Potential

Industry Comparison

CO₂ equivalent
over product lifetime*

Learn how Sisü became the sustainable alternative →

* Sustainability measured solely by Global Warming Potential in kg CO₂e/m². We compared the most similar product EPDs published on the websites of Amtico, Forbo, Interface, Karndean and Polyflor. No other competitor EPDs were checked. Correct as of January 2022.

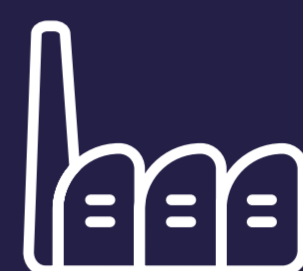

We used a Life Cycle Analysis (LCA) to compare sustainability.

LCAs are a method used to compare all impacts of a product's lifecycle, from mineral extraction through to manufacture, use and disposal.

Once an LCA is officially published it becomes known as an Environmental Product Declaration (EPD).

These reports allow consumers to compare the Global Warming Potential of products and make informed decisions based on environmental factors.

The graph at the front shows the Global Warming Potential of Sisu Dryback LVT compared with the published EPDs of our competitors.

Sisú 

Natural Oak

Made using up to 100% recycled PVC.

When companies talk about including recycled content, you expect them to be doing just that.

Up to 100%
Recycled PVC

Sadly in the flooring industry, too many companies are actually just reusing the waste from their own manufacturing process, allowing them to claim high levels of recycled content.

Sisu uses more recycled PVC than any other manufacturer.*

Sisu LVT is one of only a few companies who use PVC that would otherwise be dumped in landfills.

100% of the PVC in Sisu Click and 45% of PVC in Sisu Dryback would otherwise go to landfill.

To date, none of the other materials in LVT can be made from recycled materials, but we're working on it. This means 12% of the total Sisu Dryback board and 24% of the total Sisu Click board is recycled.

*Calculated per m², having checked the publicly available information for Amtico, Forbo, Interface, Karndean and Polyflor. Applies to Sisu LVT produced after 01/12/21.

Sisú 

White Oak

Quality, with a long lifespan.

Environmentally, the best option is to keep the floor you have in order to reduce your consumption.

If you are going to buy a new floor then you should be looking for a product that will last.

All Sisü flooring products are designed to last a lifetime.
