

Using a Digital Vernier

JAMES NEWMAN
JEWELLERY

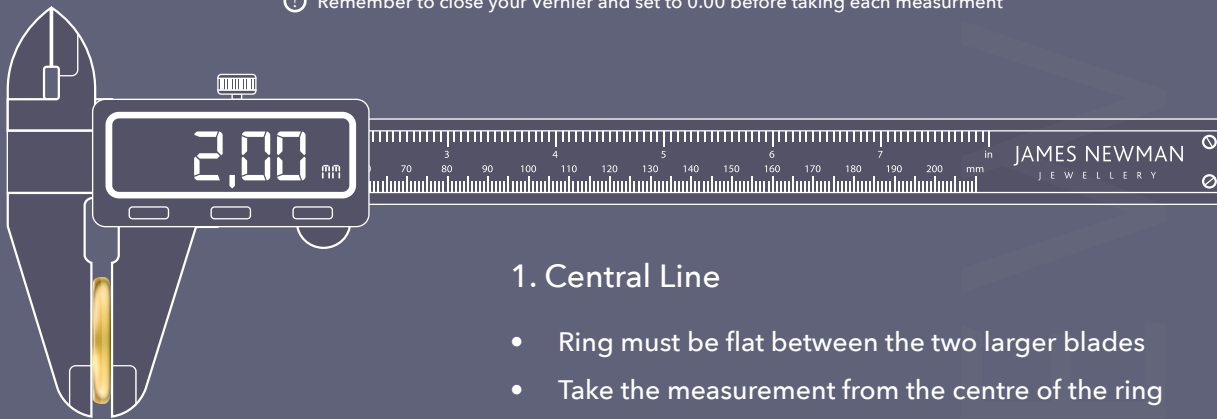

This guide will help you measure your rings correctly when using a digital vernier. Ensure your Vernier is closed & set to 0.00 before taking each measurement.

We will need three measurements:

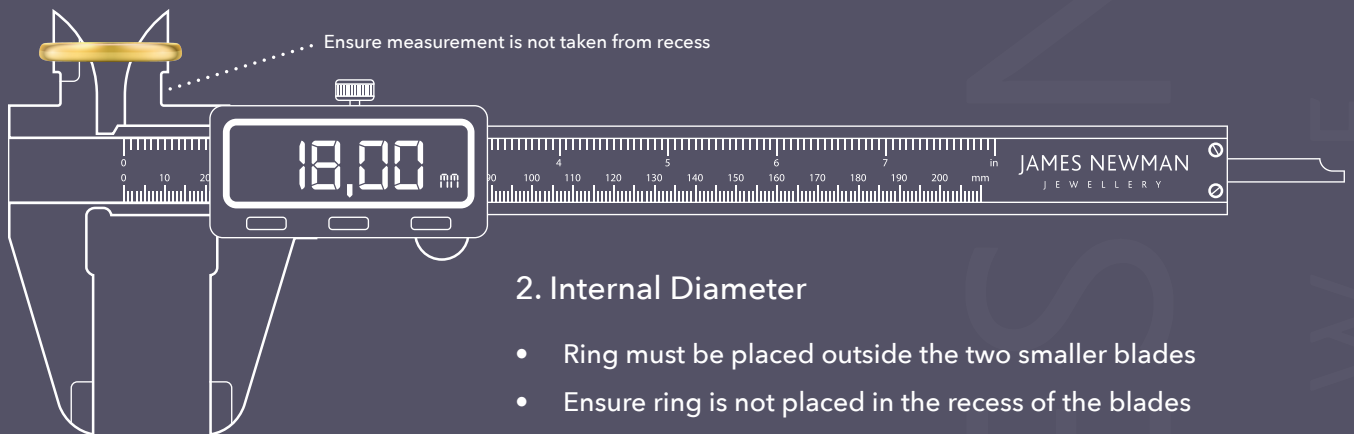

1. Central Line in mm
2. Internal Diameter in mm
3. External Diameter in mm

⌚ Remember to close your Vernier and set to 0.00 before taking each measurement

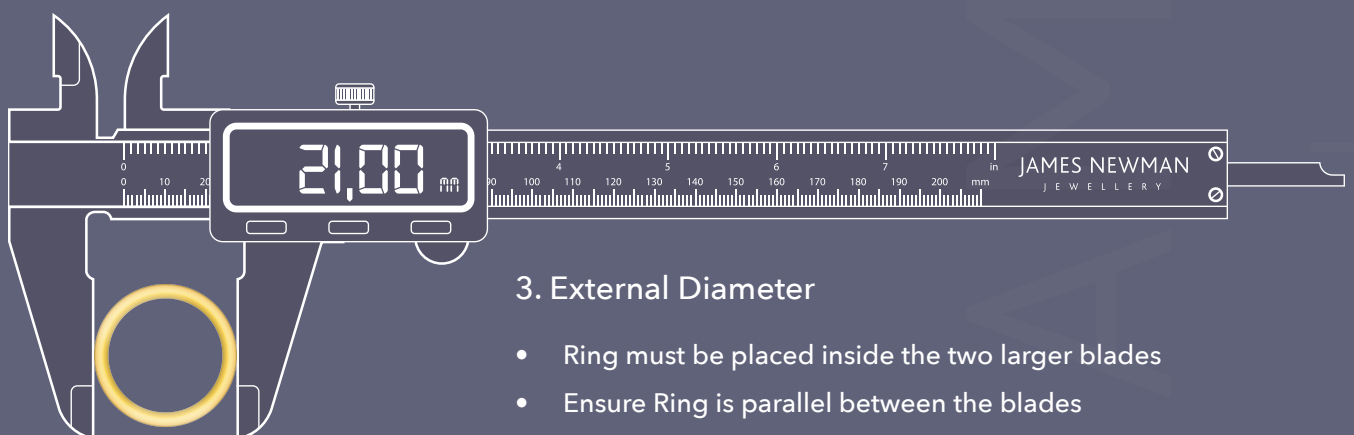

1. Central Line

- Ring must be flat between the two larger blades
- Take the measurement from the centre of the ring

2. Internal Diameter

- Ring must be placed outside the two smaller blades
- Ensure ring is not placed in the recess of the blades

3. External Diameter

- Ring must be placed inside the two larger blades
- Ensure Ring is parallel between the blades
