

A guide to operating your 1 Inch Button Maker Machine

STEP 1

- Start with the shell die on the open side of the machine.
- Put the shell, with edges facing down into the groove in the shell die. [1]
- Lay the artwork on top of the shell, with the illustration facing up, followed by the clear plastic cover (also called mylar). [2]
- Swivel die around until it stops. [3]
- Push handle down until it will go no further. [4]

Note: when the handle is fully down, no more force is needed.

STEP 2

- Lay the collet (back part) into the back die. [5]
- Swivel die around until it stops. [6]
- Pull the handle until it will go no further. [7]

Choice: Start with step one for your next button or swivel die around and take ready made button out. [8]

STEP 3

- Insert pin into the back of the button until it snaps into place. [9]
