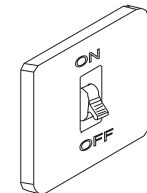

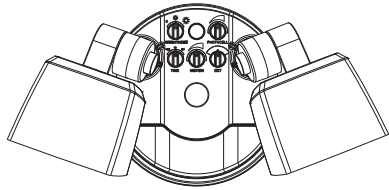

Figure 7

8. After installation, calk all the mounting surface.

# SPECIAL FUNCTIONS INSTRUCTION

## LED flood light with PIR sensor

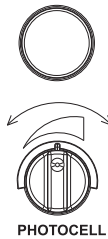

1. All lights are off at daytime.
2. When the night light is at ON state, it will turn on automatically at dusk.
3. Both led lights will turn on when motion is detected from dusk to dawn.

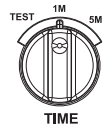

1. When the brightness is set at , the night light is at OFF state, both led lights are at maximum wattage.
2. When the brightness is set at , the night light is at ON state, both led lights are at minimum wattage.
3. When the brightness is set at , the night light is at ON state, both led lights are at maximum wattage.

**Photocell:** senses the amount of daylight and prevents the led light from being activated by daylight at daytime.

When the knob is adjusted to the far left, stronger daylight is required to activate the photocell, and when it is adjusted to the far right, less daylight is required to activate the photocell.

1. When it's set to TEST, the light is under test mode.
2. When it is adjusted to 1M, after the movement stops, the holdtime of the light is 1 minute.
3. When it is adjusted to 5M, after the movement stops, the holdtime of the light is 5 minute.

**Motion sensitivity adjustment:** when adjusted to the leftmost side, motion detection is not sensitive; when adjusted to the rightmost, motion detection is the most sensitive.
