

INSTALLATION GUIDE

VECTOR outer rim liner

Tools : Ruler, Scissors, Plastic card/Squeegee

1. This design uses 3 curved lines per side per rim (6 curved lines per wheel for both sides).
2. Please note that the design is MIRRORED so that each side has a similar pattern when fully assembled.
3. Clean outer rim area with soap and water. Dry completely. Ensure that there is no grime or dirt left as this would impair adhesion of the sticker.
4. Cut out each curved line individually as close to the colored sticker as possible
5. One wheel contains two sides. Please use 3 curved lines for each side of a rim.
6. When you are sticking the individual curves lines, use a 4.5 cm SPACE/GAP between the first and second curved line.
7. Take one curved line and peel it away from backing paper.
8. Align the bottom curve of sticker with the innermost curve of the rim (nearer to the hub).
9. Lightly tap the sticker and evaluate if the sticker is correctly aligned. You can re align the sticker if it is misaligned. Be careful though.
10. Use a plastic card/ruler to apply pressure to the sticker and run the card over the sticker 2 times.
11. Peel away clear transfer tape.
12. Repeat 2 times for the remainder curved lines for that side of the rim.
13. Before starting on the opposite side of the rim, please ensure that you used the mirrored design of the same color at the same starting point to ensure a matching pattern.
14. Repeats steps 6 to 13 and then start on the subsequent wheel.
