

#### Hey du Bastel-Held!

Bevor du loslegst: Atme tief durch, bleib locker und bau mit Gefühl.

Wichtig: Wenn sich ein Teil nicht leicht einsetzen lässt – keine Panik und bitte nicht mit Gewalt drücken oder ziehen

Dreh's einfach kurz, schau nochmal hin – das Lama weiß: Geduld spart Pflaster.

Alle Teile passen ohne großen Kraftaufwand zusammen – versprochen!

Und bitte keine spitzen oder scharfen Werkzeuge benutzen – das ist wirklich gefährlich, und das Set mag's lieber

#### Gummiband-Alarm!

Beim Spannen oder Einhaken der Gummibänder bitte besonders vorsichtig sein.

Der kleine Gummiband-Haken ist zwar aus Plastik, aber trotzdem ein bisschen spitz – also bleib dabei konzentriert und vorsichtig.

Halte die Bänder immer weg von deinem Gesicht und deinen Augen,

und ziehe sie nur leicht, bis sie sicher sitzen.

Wenn du testen willst, wie stark dein inneres Lama wirklich ist -

lass es lieber bleiben! Das starke Ziehen an den Bändern ist gefährlich und nicht erlaubt.

Sicherheit geht vor Style – und wer trotzdem neugierig ist, trägt bitte eine Schutzbrille.

Denk dran: Dieses Set soll dir Spaß machen,

nicht für überraschende Rückschüsse oder Drama sorgen.

Nur unter Aufsicht von Erwachsenen verwenden.

Und wenn dein kleiner Bruder oder deine kleine Schwester in der Nähe ist -

pass gut auf alle Teile des Sets auf, besonders auf die Gummibänder!

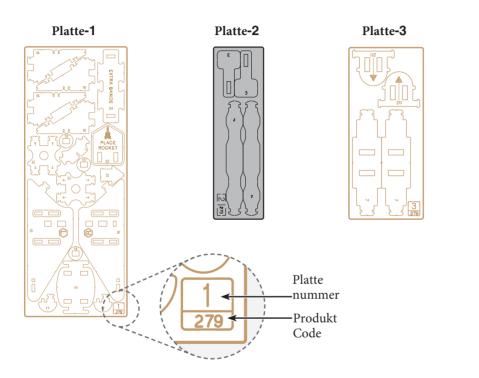

Vergiss bitte nicht (das ist wirklich wichtig!):

Nicht geeignet für Kinder unter 3 Jahren – Kleinteile = Erstickungsgefahr!

#### △ SICHERHEIT MIT LAMA-POWER

Hey Raketen-Held! Bevor du abhebst, lies das hier lieber kurz:

Nicht auf andere oder Tiere zielen! Dein Lama ist friedlich – und deine Rakete soll es auch bleiben.

> Starte nicht in Richtung Deckenventilator! Der fliegt sonst schneller als deine Rakete.

Lass den Starter nicht geladen liegen. Sicherheit geht vor – auch im All!

Benutze höchstens 5 Gummis. Mehr bringt dich nicht weiter, sondern nur aus der Bahn.

Starte nur in sicherem Abstand.

Dein Lama steht lieber hinter dir – nicht vor der Rakete.

Benutze die Rakete nur drinnen oder draußen, wo nichts kaputtgehen kann. Wohnzimmer-Raketenstarts enden selten gut.

> Frag einen Erwachsenen um Hilfe, wenn etwas klemmt. Lamas sind weise – Erwachsene auch.

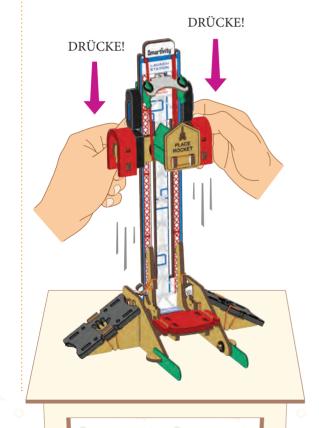

#### WICHTIG!

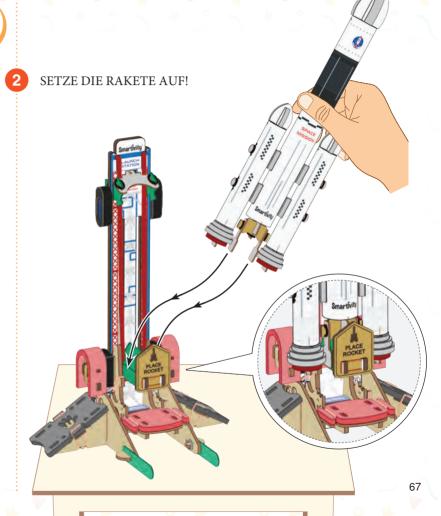

Deine Rakete ist echt eine sehr gefährliche Sache – du musst sie mit voller Ernsthaftigkeit behandeln und nur im Beisein eines Erwachsenen starten!

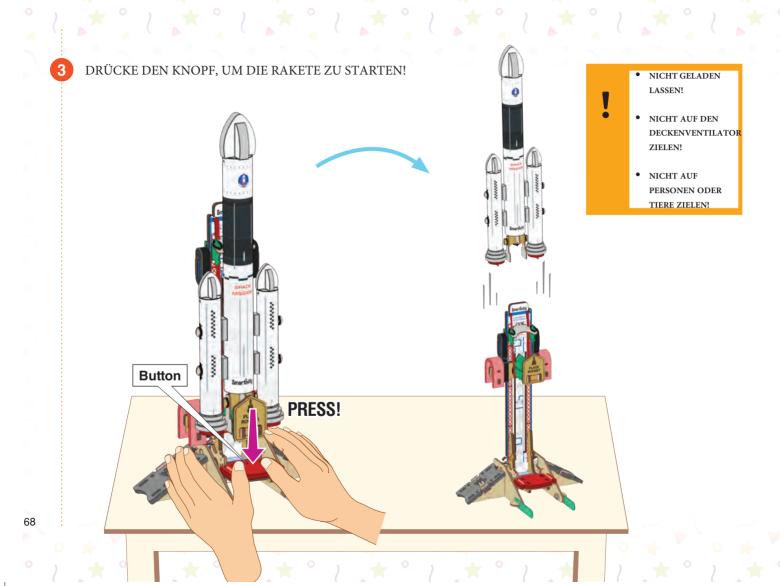

Vergiss nicht: Beim Start kann auch das Gummi reißen – also zieh am besten Schutzbrille an!

#### LOS SPIELEN!

1 LADE DEN STARTER!

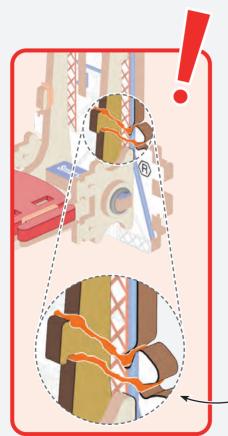

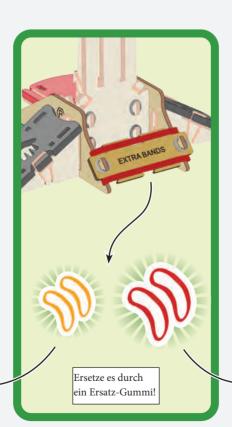

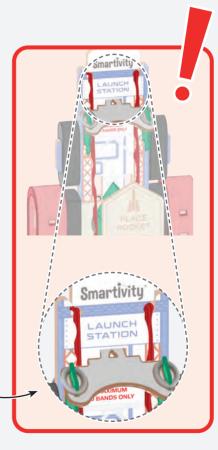

#### Hast du ein Problem?

#### BESCHÄDIGTES GUMMI?

## TRIVIA!

Scan for fun facts!

#### Menschen und das Weltall

Schau dir einige der wichtigsten Weltraummissionen der Menschheit an:

Gestartet 1969 – die erste Mission, die Menschen auf den Mond brachte. Angeführt von Astronaut Neil Armstrong. Der Teil des Raumschiffs, der auf dem Mond landete. hieß "Eagle".

#### Apollo 11 (NASA) Voyager 1 (NASA)

Gestartet 1977 – das am weitesten von der Erde entfernte menschengemachte Objekt. Voyager 1 hat die äußeren Planeten unseres Sonnensystems untersucht (Jupiter und Saturn) und befindet sich jetzt im interstellaren Raum.

#### **Hubble Space Telescope** (NASA/ESA)

Gestartet 1990 – umkreist die Erde und macht atemberaubende Bilder von Sternen, Planeten und Galaxien. Hubble half Wissenschaftlern, viele neue Dinge zu entdecken – zum Beispiel das Alter des Universums (≈ 13,8 Milliarden Jahre).

#### Mangalyaan (ISRO)

Gestartet 2013 - Indiens Mars-Orbiter-Mission. Erreichte die Marsumlaufbahn 2014 und ist eine der kostengünstigsten Marsmissionen überhaupt (nur ca. 74 Millionen US-Dollar).

Aktion

#### Wissenschaft dahinter:

Die Luft strömt aus dem Ballon und drückt ihn in die entgegengesetzte Richtung.

Genauso stößt eine Rakete heiße Gase unten heraus, wodurch sie nach oben gedrückt wird.

#### STUFE 1

Zündung und Abtrennung der Booster.

- Hitzeschild

Treibstofftank
Triebwerk

#### STUFE 2

Abtrennung der Trägerrakete – die Haupt-rakete wird dadurch leichter.

Triebwerk

Flüssigkern-Booster

#### STUFE 3

Abtrennung der Nutzlast. Am Ende löst sich die Nutzlast, und der Satellit wird freigesetzt. Feste Raketenbooster

geben beim Start zusätzliche Schubkraft

Lerne mit deiner Rakete!
