How to Fill and Empty the Tank

1. Remove the Fill Plug (No.33) from the Upper Tank Cover (No.12).

2. To fill tank with water, refer to Fig. A. Insert the Funnel (No.77) into the tank, then use a cup or the Siphon Pump (No.76) and a bucket to fill the tank. Use the water level gauge on the side of the tank to measure desired water level in the tank.

3. To empty the tank, refer to Fig. B. Place a bucket next to the rower, and use the Siphon Pump (No.76) to pump out the water from the tank into the bucket.

4. Insert the Fill Plug (No.33) into the Upper Tank Cover (No.12). Wipe excess water off of the frame.

NOTE:

- Fill the tank only with tap water. Add 1 water-purification tablet (1 packet is included.). Never use pool chlorine or chlorine bleach. This will damage the tank and void the warranty.

- Add a water purification tablet every 6 months or as needed. If water remains cloudy, replace the water in the tank.

- Water from the tank is not suitable for consumption. Dispose the water after pumping it out from the tank.

WATER LEVEL

- See Fig. A. The water level gauge is on the side of the tank. The maximum fill level is 6. Never fill it over this limit. Filling the tank over this limit will void the warranty.

- The resistance depends on the water level in the tank. Water level 1 is the lowest resistance. Level 6 is the highest resistance.
There are 3 hooks (A, B, C) for the bungee cord, located on the inside of the Frame (No.1) under the water tank. If you hook the Bungee Cord (No.39) on to B or C, it increases the assisted return of the mesh belt. C is the fastest return.

Use caution when adjusting the bungee cord.
Adjustment Guide and Storage

The pedal strap is adjustable and can be personalized to fit the user’s foot size.

To adjust the pedal strap, remove the Velcro end of the strap from the mesh side by pulling it upward and over to the side.

Once removed, you may increase the opening of the pedal strap by pulling the mesh end up and to the side.

To tighten, pull the Velcro end of the pedal strap upward then over and down to secure it to the mesh side of the strap.

To move the machine, lift up the rear stabilizer until the transportation wheels on the front stand touch the ground. With the wheels on the ground, you can transport the rower to the desired location with ease.
Adjustment Guide

Adjusting the Balance

Adjust the End Caps on the Rear Stabilizer (No.4) of the machine if the machine is unbalanced during use.

CAUTION!

Moving parts, such as the seat, can crush and cut. Keep hands clear of the Slide Rail during use.

CAUTION!

Move the Seat (No.36) to front of Slide Rail (No.3) first or it will glide down when raising the rower up!

CAUTION!
