LVSR Leverage Seated Row

Built with a 2" x 3" 11-gauge steel mainframe, the LVSR Leverage Seated Row features dual-axis, unilateral, diverging-arm movement for biomechanically correct exercises. 360-degree articulating hand grips for natural range of motion and gas-assisted chest support to accommodate different arm lengths and isolate the back muscles. The LVSR Leverage Seated Row is constructed with the commercial facility in mind and has durable, double-stitched upholstery, an electrostatically applied power-coat finish in metallic silver and gas-assisted adjustable seat pad.

Weight: 158 lbs.
Dimensions: 65"L x 35"W x 44"H

Special Features

- Dual axis diverging arm movement provides a biomechanically correct back exercise
- 360 degree articulating hand grips
- Gas assisted chest support for various arm lengths and total isolation of back muscles
- Independent unilateral arm movement
- Sealed bearing pivot points
- Adjustable seat pad with gas assist
