Warning!

For models WITH main fuse:

To prevent accidental vehicle start-up, which could cause death or serious injury, remove main fuse before proceeding.

For models WITHOUT main fuse:

To prevent accidental vehicle start-up, which could cause death or serious injury, disconnect negative (-) battery cable before proceeding.

Common Tools Required

1 - Screwdriver

LED Headlight Installation

Remove the beauty ring on the headlight:

- On the bottom left and bottom right of the stock headlight, remove the two screws with a philips-head screwdriver.
- Holding the headlight from the bottom on the housing, gently pull the headlight from the bottom. The headlight will "pop" out.
- Remove the connection from the back of the housing.

Remove the reflector from stock OEM headlight:

- There are a total of four screws that need to be removed from the headlight to remove the reflector.

Bottom Screw:

Top Screw:

IMPORTANT INSTALLATION NOTE

Do not throw away the original screw for the top and bottom of the headlight. They will have a collar on them as well. They will be reused in the installation.

Two Screw On Mount:

Now the reflector housing can be removed from the mount. It should lift directly off of the reflector.

The ring will come pre-installed on the headlight.

Reinstalling the headlight inside the OEM housing:

- Place the LED headlight with the bracket on the inside of the housing. The top hole on the bracket should match up with the black bracket on the the OEM housing

The top and bottom tabs will mount with the existing OEM bolts. Put the two of the washers provided on each of the bolts

before installing. Screw in the bottom and bottom sections.

Bottom Screw with washers:

Top Screw with washers

The two bolts will now need to be attached to the adjustment tabs. Used the provided hardware.

Two adjustment tab bolts:
