## 3D TILES

### INSTALLATION INSTRUCTIONS

#### TOOLS + SUPPLIES NEEDED

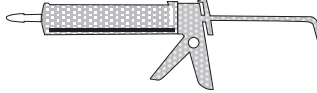

#### ADHESIVE

#### CONSTRUCTION ADHESIVE

We recommend Loctite Power Grab Heavy Duty or Gorilla Heavy Duty Construction Adhesive

#### INSTALLATION TOOLS

CAULK GUN

J ROLLER

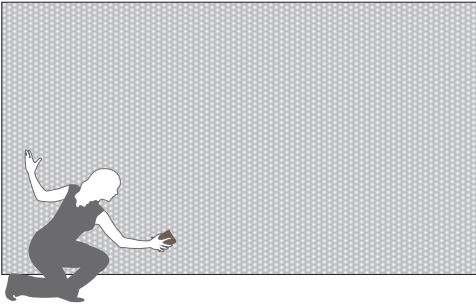

LEVEL

RULER/TAPE MEASURE

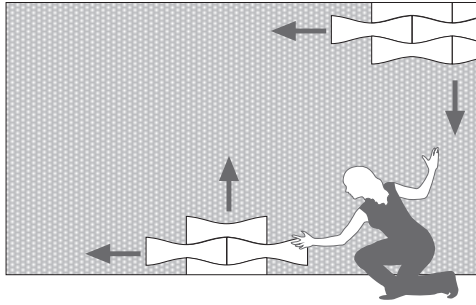

WOOD CUTTING POWER TOOLS WITH FINE CUTTING BLADES

#### 1 PREPARATION

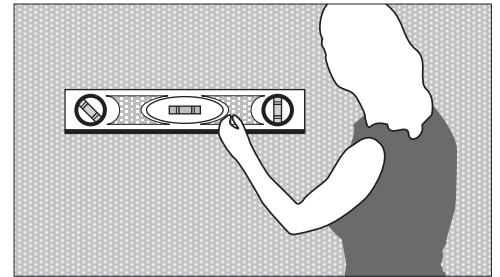

Install over drywall or plywood. Surface must be clean, smooth, dry, free of waxes and existing adhesive, dirt, dust, grease, oil, paint curing compound or sealers. Cannot be used over chemically cleaned substrates.

#### 2 PLANNING

Will your install be wall-to-wall, a floating design, a strip of panels, a mix of finishes, etc? Plan well prior to beginning and lay the tiles out or sketch it out if needed.

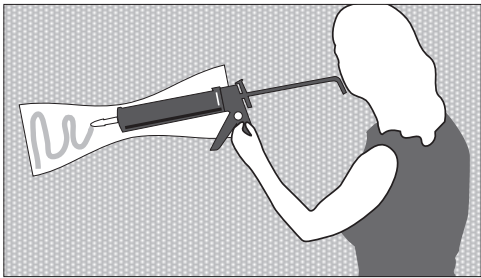

#### 3 MEASUREMENTS

Use a level and measuring tape to mark the wall with guidelines for proper positioning.

Using a level mark straight lines on the wall. Allow cut panels to fall in more inconspicuous areas like corners and the bottom of a wall. If working from the center out, all panel edges may need to be cut. Plan your design well to ensure desired results. **Remember, measure twice and cut once.**

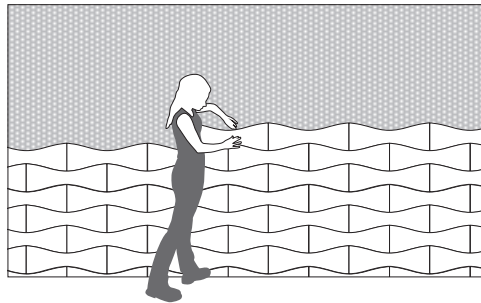

#### 4 INSTALLATION

Installing with heavy duty construction adhesive, apply a thin bead of adhesive to the perimeter of the tile about 1" from edge. Also Apply a small amount in the center of the tile. Follow manufacturer's recommendations on dry times.

**NOTE:** If you don't have baseboard to start your installation, install a support rail prior to installing. Remove after adhesive dries.

#### 5 INSTALLATION & CUTTING

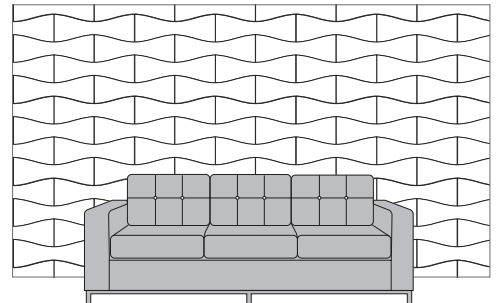

For construction adhesive method, press surfaces together within 10 minutes and apply pressure across the entire surface specifically the edges.

#### TIPS FOR CUTTING TILES

Alt 3D tiles can be cut with power tools designed for finishing work (exp: 80 tooth blade for fine cutting or melamine cutting). Follow manufacturer's suggestions for equipment use and safety.

#### 6 ENJOY

Now enjoy your transformed wall.
