

Use hi-vis garments when you want to be seen!

Björnkläder®

Reflecting garments are not just ordinary workwear!

The most important function of reflecting garments is to increase the security for those who work in environments where it is important to be easily spotted. To minimise the risk of accidents is the highest priority, but the garments must also look good and be functional in different working environments. On these pages you can study the complete Björnkläder collection of reflecting garments in several different colour sets - make sure you are seen on the job!

EN 471 Protective clothing with high visibility (Hi-vis clothing) for professional use

Certified hi-vis garments are regulated by many requirements in the norm EN 471. Some are fluorescent and reflective area, luminance and colourfastness. Relatively strict design requirements and placement of reflexes are also regulated. Beside the symbol safety classifications 1-3 is visible regarding area and reflex material, where 3 is the highest security class. Certified garments may be fluorescent yellow, orange or red with regulated luminance, i.e. visibility. Important fabric values are colourfastness and damp resistance for coated fabrics.

Minimum area requirement for EN 471 certification

Material	Class 1	Class 2	Class 3
Reflecting material / fluorescent area	0,14 m ²	0,50 m ²	0,80 m ²
Reflex	0,10 m ²	0,13 m ²	0,20 m ²
Combined background/reflex	0,20 m ²	---	---

Are you required to always wear class 3?

Then note that 1 + 2 is not always equal to 3. Check the garment table to ensure that your favourite garment combination fulfills your requirements. Note that it is the fluorescent area that determines what protection you have. If you for example wear an ordinary coat covering parts of the fluorescent areas on your trousers, the level of protection decreases. If you have decals on your garments, note that they may affect the fluorescent area. If you put the decal on a non-fluorescent area, it of course does not effect the requirement fulfilment.

Remember to:

- * Keep your garments clean - you are easier seen and look better!
- * Wash your reflecting garments separately or with other reflecting garments of similar colours. Follow the washing instructions placed on the garments. Avoid bleach. Close zippers and wash inside out.
- * If the garment needs repairing - use only materials, which at least fulfill the same standard as the garment.

Functional garments that breathe!

EN 343 Protective clothing - Protection against foul weather
 This norm shows that the garment protects against foul weather. It requires tests to be done on fabric and seams. Beside the umbrella symbol, the classification of the garment is given, waterproofness class 1-3 and moisture resistance class 1-3, where 3 is the highest rating. Note that the norm specifies different time limits on use in different temperatures to avoid overheating.

Functional hi-vis shell jacket

Functional wind and waterproof jacket with taped seams. The jacket is breathable and has ventilation under the arms. The side pockets have zippers. One of the pockets has a D-ring for e.g. keys.
