INSTRUCTIONS ON HOW TO FIX CRATE TOGETHER

1. Position the crates in your desired orientation (eg side by side or on top of each other).
2. Using the screws provided (40mm wood screws), screw directly from the inside through the top of the corner support into the corner support of the adjoining crate. Repeat at top and bottom of crate to ensure a secure fix (see arrows in diagram below). Repeat process at the opposite side.
3. This is best accomplished using an electric screwdriver or drill driver, if using a normal hand held screwdriver apply enough pressure when inserting screws to drive through the wood.
