

LIPO CELL CHECKER LOW VOLTAGE ALARM

SKU: BB6L

BB6L features 12bit MCU & a segment LCD screen that will show the total voltage & cells voltage of LiPo pack with 1mV resolution. It also features twin loud buzzers to notify you once the cells reach a user defined voltage. The lowest cell voltage can be recorded also.

Features

- Use for 2~6cells Lipo or LiFe.
- Low power MCU with 12bit ADC.
- Low voltage alarm & threshold setting.
- The lowest cell voltage can be recorded.
- Segment LCD screen, Clear display.
- Twin loud buzzers, 85db each.
- Reverse polarity protection.

Specifications

- Working voltage range: 5~27V DC
- Alarm set values: 2.7~4.0V /cell or OFF
- Voltage resolution: 1mV
- Voltage precision: +/- 0.25%
- Standby current: <10mA
- Pins distance: 2.54mm
- Size & Weight: 25x44x7.5mm, 12g

How to Use

- ⚠ **If the Input voltage is under 5V, no display on the LCD.**
- ⚠ **If the Input voltage is above 27V. the BB6L will be hurt.**

1. Connect the LiPo balance adapter to the Pins of BB6L

- If the polarity is reversed. no display on the LCD screen.
- If the LiPo pack is below 6 cells, pls connect the balance adapter from the cathode(-) side.
- After the BB6L detect right input, LCD screen will show the total voltage(Total V), unit voltage(1st to 6th) & cell voltage difference(--mV) to cycle automatically.
- Press the button to show the voltage values manually.
- Because of the time difference of connection between Pins & LiPo balance socket, Maybe the voltage value of first cycle is not correct. It will be correct from the 2nd cycle.

2. Set the Alarm values

- Hold the button 3 seconds to enter the setting.
- Alarm voltage can be set between 2.7V~4.0V/cell in 0.1V increments by pressing the button, Alarm function can also be set as OFF. Default is 3.3V
- The value will be saved & exit if no action within 5 seconds.

3. Low voltage alarm & The lowest cell voltage

- During the using of LiPo, BB6L will detect the voltage always.
- If the cell voltage is below the Alarm value, the alarm will be triggered with "Be.Be..Be..Be....", and the lowest cell voltage will be flashed.
- If the alarm be triggered, the alarm value still can be set by holding the button 3 seconds.
- If the cells voltage rise again, the alarm will be suspended, and the lowest cell voltage still be shown.
- Press the button to show total voltage, unit voltage, cell voltage difference & the lowest cell voltage to cycle manually.

L=Lowest
C=No.3
