

## **User Guide**

# **Pole Mounted Bat Boxes**

**SKU: B1POL SI/DB RM/LC**

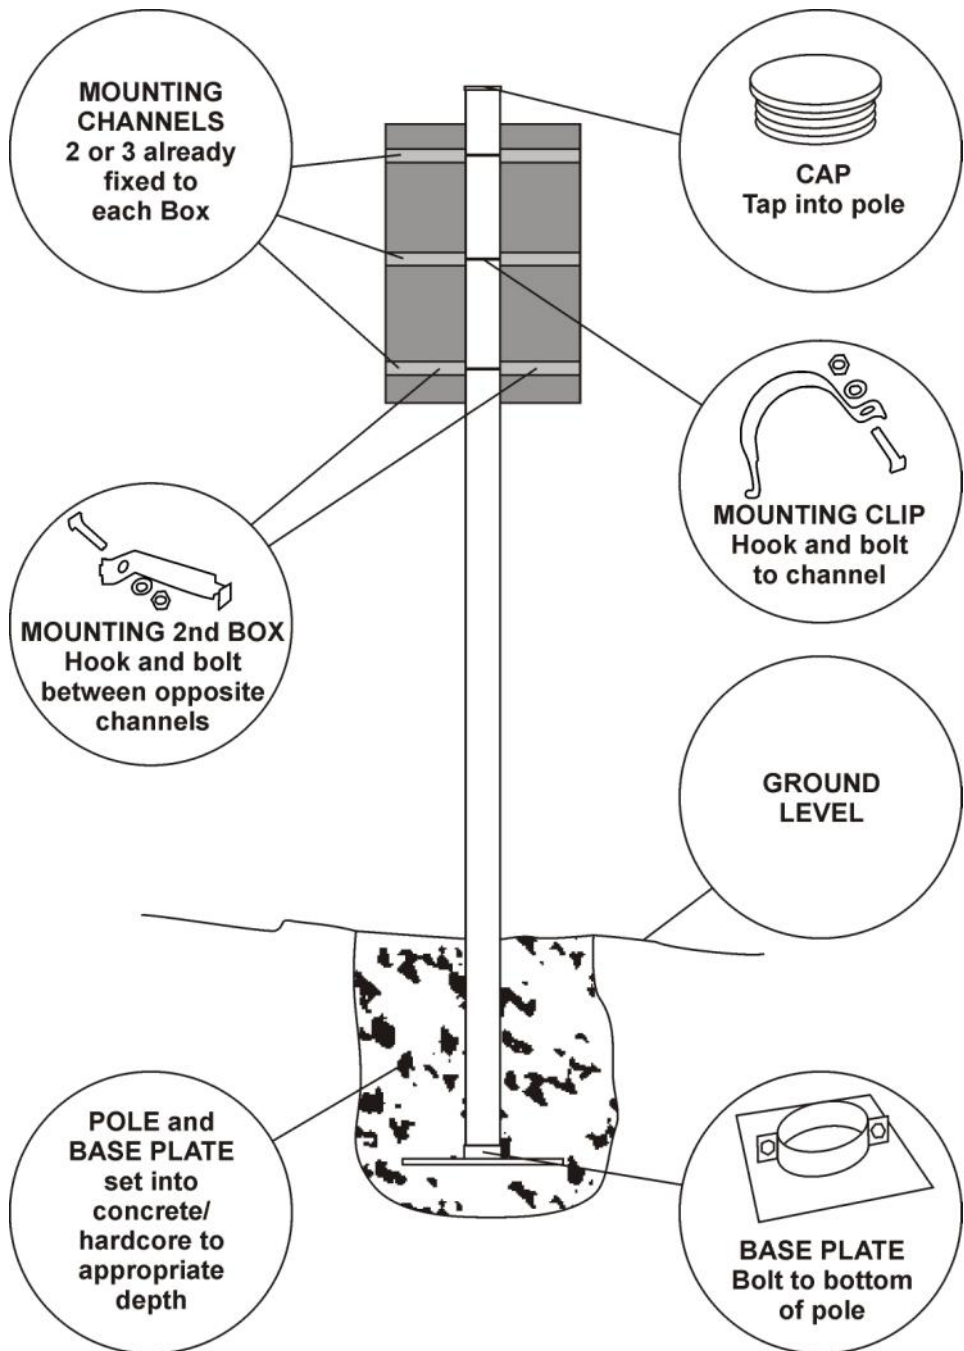

**Thank you for purchasing this Pole Mounted Bat Box.** We hope it provides many years of great service to you and the resident bats.

Depending on the product you have selected, it will come with either 1 or 2 boxes, and each box will have either 2 or 3 Mounting Channels fixed to its back. First fit your only, or the first bat box to the Pole. Use 1 of the semi-circular Mounting Clips (with bolt and washer) in each Mounting Channel (please see diagram opposite). Make sure the box is aligned parallel to the Pole, and tighten the Mounting Clip so it is secure. If a second box is to be fitted, position it back to back with the first box, with the Pole in between. Use 2 of the Straight Mounting Clips for each pair of Mounting Channels to attach the second box to the first (NB not directly to the Pole) and then tighten all the bolts to secure the 2nd box.

To assemble and erect the Pole, fit the Cap of the Pole by tapping it firmly in position with a mallet or similar. Bolt the Base Plate securely to the base of the Pole. The Base Plate and lower part of the Pole should be secured fixed into the ground. Please follow the advice of a suitably qualified builder or structural engineer etc. Depending on the ground conditions we recommend approximately 1 metre depth of concrete.

These are heavy boxes, and should be erected with care by suitably qualified people with due regard for the safety of themselves and anyone who may pass near the roost. They should be checked regularly (we recommend annually) to ensure the Pole and boxes are securely fixed, not deteriorating and not likely to fall down.

Please note: The product comes in two parts, which may be dispatched separately; The Pole, Base Plate and Cap as one part, and the bat box/es with fixings as the other .
