

SUKKAH ROOF ASSEMBLY INSTRUCTIONS

STAGE 1 (a): BRACKETS Once your sukkah is standing place the L shaped bracket **INSIDE** the upright poles of your sukkah (see fig 1)
(If you have rubbers in the top of the pole remove them with a pliers)

Please note: there are 2 brackets for the right side & 2 for the left & they are not interchangeable.

STAGE 1 (b): Now insert the square long bars into the brackets, with the protruding squares facing inward. (see fig 2)

STAGE 2: Divide the rings equally per number of arched poles; then slip them onto each arched pole. Insert the arched poles into the square corners. (see fig 3)

Fig 3a

STAGE 3: ROOF MATERIAL The roof material has compartments in which to slide the supporting beams. The beams are in individual packets; the contents of each packet join together to form 1 pole. Make 1 pole at a time (see fig. 4).
Slide each pole into its own pocket in the roof material (see fig. 5).

Fig 5c

STAGE 4: ATTACHING ROOF MATERIAL TO THE ARCHED POLES Now place the material between the top of the sukkah & under the arched poles with the clips facing up. **Note the supporting poles lie perpendicular to the arched poles.** Now attach the clips to the rings on the arched poles. (fig 6)

Fig 6

STAGE 5: PULLEY SYSTEM Please study the diagram (fig7) before reading on.

Fig 7

You will find 2 pulleys. There is a hole in the middle of each horizontal pole, fasten the pulleys to the center of both horizontal poles with the bolts, with the roller face down.

For the (2x2)m and (2x3)m Roof, make a small incision in the centre of the one end of the roof material. For the (3x3)m and (3x4)m Roof, this is not necessary because they attach to the middle pole.

Now take the rope & fold it in half, you will need to attach the centre of the rope to the middle of the end of the material. (see fig 7) On the (2x2) & (2x3) this is done by inserting it through the incision & tying around the last pole, & on the 3x3 & 3x4 you attach it to the bottom of the last clip. Now pass each end over the material & through each pulley. (see fig 8)

Finally attach the other end of the material to the square cross pole by pushing the last rings over the end of the arched poles.
