

CONGRATULATIONS ON YOUR CHOICE OF A SUKKAT PA'ER DELUXE

The Sukkah is made of strong material and is designed to fit around its frame with the utmost ease.

The Sukkah features two roll up windows and a zip-up door with nets to keep the bugs out. No screws, nails or tools are required. The poles are designed to interlock into each other.

The basic Sukkah consists of	4	vertical poles (with squares on them)
	11	horizontal poles (with square wedges on them)
	1	bag
The 3x4 m Sukkah has an extra	2	vertical poles (stand vertically in the middle of the Sukkah)
	7	horizontal poles

NOTE : If your box has thicker horizontal poles, these are to be used as the top horizontal poles !

TO ASSEMBLE

Construct the frame as in the diagram above as follows : Lay the poles out on the ground in the way that they would be constructed. I.e. two horizontal poles for each wall and one vertical pole for each corner.

For the 3x4 meter Sukkah:

- Place the four vertical poles in the four corners
- On the 3 meter sides place two horizontal 3 meter poles on each side;
- On the four meter sides, place two horizontal poles alongside another two horizontal poles with the vertical 'joining' poles in between them.
- Place a 3 meter horizontal pole between the two vertical joiners.

You must now construct the frame (without using the material). The frame will stand on its own and will not fall over if all the wedges are properly inserted in the vertical poles. At this stage, all the wedges on the horizontal poles should face downward. Do not insert the middle poles until the end. Ensure that the square on the middle of each vertical pole is at the bottom half of the pole. Note : the poles are made to insert into each other with ease. Should you experience difficulty, try align your vertical poles so that the Sukkah is a perfect square or rectangle.

You will now have the full frame standing on it's own.

Unravel the material around your frame and ensure that the door is in the correct position. Start connecting the material to the top poles of the Sukkah only. To do this open each valcro flap and close it around each pole. Attach the valcro so that it just holds, allowing room for the bottom poles to be inserted. You will tighten the valcro later. Do the same for the next four sides.

You should now have your frame standing with the material inserted on the top poles only.

You must now invert the bottom poles and fasten the material around them. Start with the open corner and work your way around the Sukkah so that the last wall which you complete, will be the side with the door. **Note:** You must now invert these bottom poles so that the wedges face upwards. This is essential so that the poles hold the material taught.

Now, tighten all the valcro flaps, place the middle poles in their slots and fasten all the valcro strips.

You can now roll on your Permanent Schach and decorate your Sukkah

SukkahMart also provides other products for Sukkot:

Permanent Schach which can be used from year to year. It is made of light reeds and held together by natural "gava" fibers and has been approved by Halachic authorities worldwide. It is neat and tidy, does not leave dry spots, nor drop leaves in your soup. It is no 'schlep' to carry and no struggle to put up. You just roll it over your Sukkah and roll it off after Sukkot and store it for next year. Use only natural fibers to tie your Schach to the Sukkah.

Lulav & Etrog sets of the best quality with prominent Hechsherim at affordable prices.
