

How To Measure Your Bra Size

Step 1:
Measure your band

Wrap a soft measuring tape just below your bust. Make sure it's even in the back.

A: Original underbust measurement _____ inches

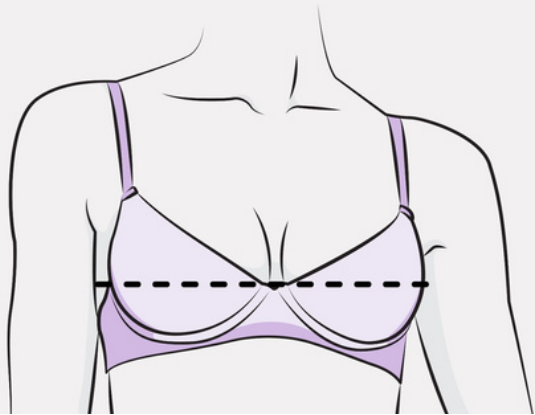

Step 2:
Calculate your band size

MEASUREMENT IN INCHES	HOW TO CALCULATE BAND SIZE
26 - 32	If even, add 4. If odd, add 5
33 - 38	If even, add 2. If odd, add 3
39 +	If even, add 0. If odd, add 1

Write down your band measurement from step 1. Using the chart above, calculate your band size.

B: Calculated band size _____ inches

Step 3:
Measure your bust

Wrap a soft measuring tape around the fullest part of your bust. Make sure it's even in the back.

C: Bust measurement _____ inches

Step 4:
Calculate your cup size

The difference (in inches):	0	1	2	3	4	5	6	7
Your cup size is:	AA	A	B	C	D	DD	DDD, F	G

Take your original band measurement from step 1 and subtract it from your bust measurement in step 3. Use that number to determine your cup size based on the chart above. Your calculated band size (B) plus your cup size (see chart) is your final bra size.

C minus A = _____

Pro tip: If your original band measurement in step 1 is below 32 inches and you're getting a number that doesn't seem reasonable, try adding 2 to your band measurement before you subtract it from your cup size.
