WE'RE HERE TO HELP

Align with the underside of your top rail or previously drilled pass-through hole.

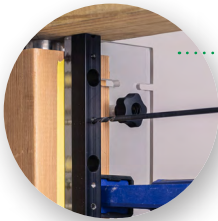

**IMPORTANT:** Make sure the first hole you drill is no more than 3" from your top rail.

Adjust the knobs to align with the side of your post. For posts wider than 6", remove the knobs to center the guide on your post.

9/16" Cable Bullet tensioner holes

3/16" cable pass-through holes

Center the black bar on your post.

Clamp the drill guide to your post or hold firmly in place.

To drill your tensioner holes, flip the template and line this guide up with the underside of your top rail or the previously drilled tensioner hole.

**PRO TIPS:**

- Use a high quality carbide bit with good rigidity.
- On pass-through posts, drill from both sides of the post to maintain accuracy.
