- 1 Use an angle finder to adjust the **head A** of your drill guide to match the angle of your top rail.
- 2 Align, then clamp the drill guide to your post. Use the **right angle screws B** to set your center point.
- 3 Drill your cable pass-through holes with the 3/16" head.

PRO TIPS:

1. When clamping to finished posts or sleeves, use painter's tape to avoid scratches.
2. For best results, use WD-40 on your drill bit to avoid premature wear and help prevent seizing.
3. Use a high quality carbide bit with good rigidity.
4. On larger pass-through posts, drill from both sides to maintain accuracy.
