Embracing the Elements

We give you nothing but the best: an all-in-one cleaning and whitening experience that’s affordable, yet potent. Sure, we want you to show off your smile, but more importantly, we want you to feel good. Welcome to a clean that inspires confidence, for you and those you love.
Toothbrush Features
40,000 Brush Strokes Per Minute
Compared to the 300 strokes per minute you had with your old manual toothbrush.

4 Brushing Modes

**CLEAN:** For a standard, all-around deep clean. This mode tackles the surface of your teeth and those hard-to-reach areas.

**SOFT:** Fit for those with tooth sensitivity, this mode cleans extra-gently so you don’t have to worry about over-brushing your teeth and gums.

**WHITEN:** This mode focuses on polishing off surface stains to leave your teeth clean and sparkling.

**MASSAGE:** Use this setting during your brushing routine to treat your gums to a gentle massage.

Brushing Timer

2-minute auto-timer ensures you’re brushing the ADA-recommended time, while a 30-second interval timer prompts you to move to different areas of your mouth for an even clean.

Extra-Long Battery Life

Using a lithium-ion rechargeable battery means longer times between charges.

Waterproof

Just in case you drop it in the sink.
Getting Started

Before trying out your new toothbrush, make sure to charge it completely.

**To Charge**

1. Turn off the toothbrush.
2. Plug the charger into the power outlet.
3. Place the toothbrush handle in the charger.
4. The indicator light will glow red when charging, then green for 10 seconds, then off when your Elements is ready for action.

**Notes About Charging**

A complete charge lasts 10 days or 20 pre-timed brush cycles.

**Charge for 24 hours if:**

This is your first time using the toothbrush.
The toothbrush has not been used for more than 3 months.
The charge is fully drained.

**You can leave it in the charger:**

In between uses, feel free to leave your toothbrush in the charger to keep your battery full.
How to Use

Brushing with your Elements Toothbrush is easy. If you are new to using a sonic toothbrush, make sure to read through the following tips as the experience is much very from manual brushing.
Attach Brush Head
There will be a small space between the brush head and the handle--no need to force it flush.

Hit MODE
Select from one of the four cycles. If you’ve found a favorite mode and used it last time, you’re already good to go!

Add Toothpaste
Remember, a little goes a long way.

Angle at 45°
Plaque hiding in the hard-to-reach areas between your teeth and gums doesn’t stand a chance.

Turn On Your Brush
Simply press the on/off button to begin.

Light Pressure
Pressing too hard can cause problems like gum recession. Use light pressure when brushing as the sonic movement will ensure a deeper clean.
**Small Strokes**
To give every tooth the attention it deserves, use short circular strokes while brushing the front and back of your pearly whites.

**Divide And Conquer**
In order to maximize your clean, divide your mouth into four sections. Elements’ 30-second interval timer will prompt you when it’s time to move to a new area.

**Brush For Two Minutes**
At the end of two minutes, your brush will automatically shut off, giving you the ADA-recommended time, every time.

**Rinse**
Remove the brush head and rinse under running water. Shake dry before returning it to the charger or sanitation compartment.

**Storage**
Place the handle back on the charger to keep your battery happy and your brush head in the UV sanitation compartment for hygienic storage.
Show off your smile.
Sanitizing the Brush Head

Ready for the best part? Elements includes a UV Sanitizing feature that sanitizes your brush heads between uses. This sanitizer gets rid of 99.9% of bacteria like E.Coli, Candida, and Salmonella (just to name a few) that could be floating around your bathroom.
So how does it work?

Open the Sanitizer Cover
It’s located next to the charging dock.

Place Brush Heads
Arrange up to 4 Elements brush heads on the stand with the bristles directly facing the UV bulb.

Plug In
Check the voltage beforehand to ensure the selected outlet corresponds with the power of this device.
[AC 100 240V 50/60HZ]

Activate the UV Sanitizing Process
The UV sanitizing process will automatically start every time the door is shut.

Glow, Baby, Glow!
During its 10 minute cycle, the UV sanitizer will emit a blue glow. Once the cycle is complete, the light will automatically turn off.
Oral care is now one less problem you have to manage.
Minimal maintenance is required for your Elements Sonic Power Toothbrush, but intermittent cleaning is recommended.

**Cleaning the Charger**
Unplug the charger from the wall and remove any brush heads from the sanitation compartment. Using a soft cloth, wipe any dirt or dust that may have accumulated on your charger or UV bulb. We also recommend cleaning the plug periodically, especially the metal plate, to ensure it remains in proper working order.

**Cleaning the Toothbrush Handle**
Remove the brush head from the toothbrush handle. Using a damp cloth, wipe the toothbrush handle, but do not submerge it in water.

Note: The Elements toothbrush is splash resistant—it is safe for your normal brushing routine. However, it is not waterproof so do not put any part of your toothbrush in the dishwasher.
FAQ

**Q:** What do I do if my Elements Toothbrush isn’t working?

**A:** Try charging it fully. If you have just purchased the product or it has not been used in three months, it needs to be charged for at least 24 hours.

**Q:** Why does my Elements Toothbrush have a weak or diminished vibration?

**A:** It's possible that you are pressing the toothbrush too firmly against your teeth. Try a more gentle grip for increased vibration.

**Q:** Is it normal for my Elements Toothbrush to get warm during charging?

**A:** Yes! This is totally normal and nothing to worry about.
Q: What can I do if my toothbrush works for only a short period of time, even after removing it from the charger?

A: Try giving the handle a complete, 24-hour charge. If the issue persists, your battery may have reached the end of its life cycle. Contact Customer Experience for support.

Q: Why doesn’t my UV Sanitizing light turn on?

A: First, ensure the sanitizer door is completely closed and the device is plugged in. If the problem continues, you may need a new UV bulb. Contact Customer Experience for support.
