

Adding the Horn Option for Glenda's

- Another great safety feature that we offer for our lights is the additional horn option. This option comes standard on our Krista lights, but is also possible to install on our Glenda lights. You can either purchase the required wiring and diodes from us, or grab your own parts from the local electronics store.
- What you need to do to make the lights function with the horn simultaneously is to add diodes before the high beam and to a wire leading to the horn which allows the lights to activate as if you were flipping them to high beams when you initiate the horn. This is used to warn other drivers in an instant with your horn and a bright flash of light to keep you safer on the road.
- Follow the diagram below for wiring and installation.
