BASIC CAMPING MUST HAVES

Campsite Must Haves
- Tent (with stakes and footprints)
- Sleeping bag & pads & pillow
- Camp table & chair
- Flashlight or lantern
- Portable solar power generator
- Navigation tools
- Lighter & approved firewood

Camping Kitchen Must Haves
- Cooking grill or fuel
- Cooking stove
- Lighter/firestarter
- Cooking knife
- Cutting board
- Coffee maker
- One plate and bowl
- Knife, spoon, and fork
- Oven mitts
- Bottle opener
- Kitchen scissor
- Food storage container
- Cooking oil
- Water
- Eggs
- Seasoning
- Meat
- Potato
- Bread

Clothes/Footwear Must Haves
- Water-proof jacket
- Hiking pants or shorts
- Moisture-wicking underwear
- Water-proof hiking boots
- Hiking socks
- Gloves

https://www.jackery.com/
- Camp sandals
- Sun hat
- Bags for clean & dirty clothes

**Hygiene & Toiletries Must Haves**
- Hand sanitizer
- Toothbrush & toothpaste
- Shower kit
- Quick-drying towel
- Hairbrush
- Toilet paper
- Mirror
- Suncream
- Razor & shaving cream
- Baby wipes
- A portable solar shower

**Clean-Up Must Haves**
- Trash bags
- Environmental-friendly dish soap & towel
- Cleaning kit (wipes, sponge, etc.)
- Stain-remover pen
- Dustpan
- Portable sink for dishwashing

**Safety & First Aid Must Haves**
- Personal medication
- Bandages
- First aid kit
- Finger splints

https://www.jackery.com/
Eye drops
Bee sting kit
Bug repellent
Emergency blanket
Map of area
Whistle
Thermometer

Personal Items Must Haves
ID
Credit card or cash
Cell phone & charger
Your keys
License & permits
Umbrella
Eye mask
Notebook & pen
Park pass

Recreation Gear Must Haves
Fishing kit
Sports equipment (winter skater, volleyball, etc.)
Swimming gear
Kayak
Board game or card
Music player
Video camera

HOW TO CAMP IN THE RAIN

https://www.jackery.com/
On the other hand, camping in the rain may be anything from a bit of inconvenience to a pleasant adventure if you are well-prepared.

1. Pay Attention to Weather Forecast

You should be checking the weather prediction for the region where you'll be camping in the days before your trip, even if, hopefully, this is clear to you. The forecast might have changed since you last checked it, so check back often. Mountainous regions are particularly prone to change because the weather is frequently erratic.

You should bring rain gear even if the forecast indicates the days will dry. You can experience sudden winds picking up or an unsettling quiet while hiking or camping. Also, your dog may start acting like a storm is coming. If these things happen, you should prepare for a storm.

2. Set Up Your Campsite

Camping in the rain has resulted in some of our most pleasant evenings spent in a tent outside. My favorite is the sound of rainfall on your flysheet and the coziness of a warm, dry sleeping bag at the end of a long day on the foggy path.

Step 1: Find A Right Campsite

Selecting the proper campground and tent position is one of the most critical stages to ensuring that you will have a dry, warm, and happy experience camping in the rain. Placing your tent in a low-lying region, such as at the base of a slope, is one of the worst decisions you can make when setting it up. However, because it’s typically open and relatively flat, it can be tempting to pitch your tent there.

Select a campsite away from a river or lake with a little elevation. Waking up in three inches of water during a downpour is not enjoyable. Even better, it will be more straightforward on gloomy mornings to get yourself out of your sleeping bag if your tent faces the rising sun.
And whatever you do, avoid locating your camp near a tree. Even after the rain has stopped, showers will continue to fall on your head, and if the wind kicks up overnight, fallen limbs could hurt you.

**Step 2: Take A Waterproof Tent**

A waterproof tent should be your top priority while planning your camping trip in the weather. It should be tough enough to handle severe downpours with ease. You must first protect your home base. Think about purchasing a tent with a vestibule. There are vestibules in some compact trekking tents as well. By doing this, you can open the tent door while remaining dry. In addition, some vestibules have enough surface area for you to store things underneath them.

**Step 3: Create An Outdoor Area with Tarp**

Modern camping tarps are small and hardly apparent in your bag, yet they are indispensable for having fun in the rain. Learn a few alternative methods to set up your tarp and use it to cover a new space for cooking or socializing, expand the porch, or protect your tent.

And despite our extensive knowledge, hanging the tarp is always tricky! The trees, where are they? Can we raise our rope to a suitable height? Is there a long rope here? Has the tarp adequate space? Have we got extra tarps? The procedures for hanging a tarp are as follows:

- Lay out your tarp, take a visual measurement of your area, and check that your ropes are long enough.
- To create your primary high line across, locate your two main trees. To attach your tarp to this line, lay your rope between those two trees. Alternatively, fasten them to your tarp if you're only using the corner ropes.
- Raise the cord on your ridge line to the two most giant trees. Make sure that this ridge line is stretched taut and firmly fastened.
- Continue by attaching other sides and corners as you go. If necessary, use a support pole and guide wires.

Step 4: Consider Pop-up Canopy
These shelters can be helpful when vehicle camping in the rain as long as you don't expect them to withstand severe winds, you're willing to take them down if necessary, and your stake and support them well.

Step 5: Extra Layer inside of Your Tent
If the rain is severe and lasts long enough, moisture may still enter your tent, even with a tarp underneath it. Add a layer of lining to the interior of your tent to solve this issue. Cut a piece of the heavy plastic sheeting that builders use that is about six inches wider than the circumference of your tent. By putting this inside your tent, you can prevent moisture from penetrating and getting on your equipment.

3. Camping in the Rain Meals
No matter how much it may rain, cooking inside your tent is never a good idea. The tents are very explosive. Therefore the risk is not worth it. Although it may not always be necessary, being able to cook while camping in the rain can be a vital ability. By being more proactive in your planning, you may reduce cooking in the shower and prevent eating a soggy meal by using these camping techniques for cooking in bad weather.

Step 1: Plan Your Meals
Often, the last thing you want to do is cook in the rain. You'll need more calories than usual to stay warm overnight, which is unfortunate because it will be cold and rainy. Pack prepared meals that cook fast or dried foods if you anticipate being in a lot of rain.

Step 2: Create a Campfire
It takes skill to build a campfire effectively, and it's more challenging to do so in the rain with fuel that can be wet. To begin with, you must guarantee that you can always ignite a fire. When camping, you need a dependable lighter, whether the fire is a campfire, a tiny stove, or anything else.

https://www.jackery.com/
From least to most effective, your options for starting a significant fire are waterproof matches and a waterproof lighter. Here, water resistance is crucial. Wet standard matches are pointless. Then you require tinder. Tinder is a quick-burning, lightweight material that rapidly catches fire. You may still have a few options for fuel in a damp and rainy environment.

**Step 3: Cook When Camp in the Rain**

Remember that you shouldn't use your camp stove inside your tent, but unless it's pouring, you should be able to find enough cover to prepare a fast dinner while camping. It can be appealing to skip dinner and retire to your tent for an early night. It is advisable to use a tent stove explicitly made for use inside a tent when cooking inside one. Not just any tent, though. Stock jacks are also required so that the gases can escape from the tent.

There are some recommendations for camping in the rain:

- **Camping Tacos**: are a quick and enjoyable lunch or dinner option. Each camper can create their own bag with all their favorite taco ingredients! Then, prepare the meat home and reheat it on the camp burner.

- **Camping sandwiches**: are always a good choice for camping outings in the rain. Ham, tuna, egg salad, etc. There are countless ways to create a delicious sandwich.

- **Pasta salads**: are a fantastic make-ahead alternative for camping meals. They're excellent for lunches in particular. To complete the dish, add a source of protein, such as cooked chicken or beans.

**4. Keep You Warm When You Wet**

If you're fortunate enough to reside in a region where it occasionally rains but remains relatively warm, you might not be as concerned about having all this gear to keep you dry. But staying dryer also means staying warmer because it gets colder when it rains.

**Step 1: Pick Up the Plastic Bags**

https://www.jackery.com/
Airtight Ziploc bags and large black garbage bags are easy to pack and reasonably priced. They will save your life if you get trapped in the rain. To keep your pack dry, use the large, black waste bags. The bags can also keep damp equipment out of the way, so it doesn't get wet everywhere, like sopping shoes or garments.

**Step 2: Make Your Layering System**

A solid layering system and the appropriate camping rain gear will help you maintain a comfortable body temperature by wicking away moisture when you're active and trapping it when you start to cool off. Under a waterproof jacket or rain poncho, choose the base and mid layers made of wool or polyester. Cotton is never a wise choice because it retains moisture after being wet, rapidly lowering your body temperature. When you're hanging out at camp, you'll need dry clothes to change into and something hot to warm yourself, so be sure to carry an extra set of base layers and wool socks in a waterproof bag.

You'll need a top-notch waterproof jacket, a pair of waterproof pants, and a pair of waterproof boots if you're camping in the rain. Next, you must put the appropriate layers underneath this outer armor. Underlayers are absorbent and quick to dry, helping you maintain a stable body temperature while allowing perspiration to dissipate.

**Step 3: Take Waterproof Bags**

Use a suitable weather-resistant or even waterproof bag to protect your equipment. Don't rely on your typical hiking backpack's water resistance. Instead, you should always pack everything you need for a rainy camping trip into a waterproof bag, even if your tent is waterproof. It includes your sleeping bag, a change of clothes, food, any electronics, and any medical or emergency supplies.

5. **Don't Forget to Take a Portable Power Station**

Being ready enables you to survive rainy disasters on your camping trip. Therefore, it is vital to

https://www.jackery.com/
provide you and your family has access to the electronic equipment needed to stay in touch, safe, and comfortable during severe weather occurrences.

One of the essential items in your emergency supplies bag if you're camping in the rain is a portable power station. How do you plan to contact emergency services if your phone is dead? How will you find your way if you become lost or your flashlight runs out of battery in the dark woods late at night—especially on a rainy day? Those gadgets are fueled if you don't have the means to keep them. A portable power station can help in these situations.

Jackery portable power stations are ideal for rainy-weather camping. All your electronics, including the cook stove, lighter, heater, or warmer, can be charged using a regular power outlet inside the tent. So no matter how much rain falls, you can stay in your tent or find a warmer and lighter location.

6. Rain Camping Activities

A little rain shouldn't deter you too much in warm weather. So put on your raincoats and go about your normal camping activities outside. Make the most of the shower. The idea that rain ruins camping trips is common but should turn lousy weather into a good mood with games.

If it starts to rain, you can still have a good time by briefly engaging in some of the activities below for camping with rain:

- **Tea Talk in the Rain:** you don't typically have much time for gup shup with your close friends in your busy daily routine, but you can take advantage of it when you're camping, especially if it's raining and you can't do any outdoor activities. Although it's raining, enjoy a cup of hot tea or coffee and chat with your pals.

- **Card Games:** by playing cards, you may pass the time that might otherwise seem tedious

2 Jackery portable power stations: [https://www.jackery.com/collections/portable-power-stations](https://www.jackery.com/collections/portable-power-stations)
to give during a torrent of rain. Since you can't perform any outdoor activities in this situation, the ideal indoor game will be playing cards with a large group of people.

- **Reading:** while camping, you must carry your favorite books with you because it is the finest activity to do when it rains. It will also be enjoyable to read a book outside, away from the bustle of the city.

MORE HACKS FOR CAMPING WITH RAIN

It's challenging to camp in the rain. Particularly in the winter, it cannot be easy to have such luck, so we're all accustomed to watching the weather forecast like a hawk to find a weekend with suitable weather to go camping in the wilderness.

**Be Aware of Rainy Danger**

Wet ground is slippery footing, whether traversing miles of soggy terrain or just taking a few steps outside the tent to dump some of your water. If you trip and fall on damp ground, you could have a significant injury or become drenched in the muck in a less severe but still undesirable scenario. Ensure your hiking boots or trail shoes have sufficient traction and fit your feet comfortably. When traversing streams or damp rocks, use trekking poles to increase your stability.

Make sure you are far from a lake's edge or a shallow area close to a river. Rain can cause water to rise, even over river banks; stay away from the site. Make sure your campground is 200 feet away from rivers, lakes, and streams in any weather. Find a windbreak, such as a boulder, wall of plants, or trees, to put between yourself and the wind if a storm is particularly windy.

**Prepare the Survival Kit in Rainy Camp**

https://www.jackery.com/
To stay safe, you should have everything you need in a survival kit. In addition, it is the most critical aspect of preparing a portable power station for a wet trip. So, even if the power goes out, you can still use your devices and lights and charge your electronics.

You know those pocket-sized chargers you can buy to boost your cell phone when you’re out and about? The Jackery produces a transportable, rechargeable, battery-powered generator. An internal lithium-ion rechargeable battery powers your gadgets by converting DC from the battery to AC through a pure sine wave inverter.

- **Jackery Explorer 2000 Pro**: It is a dependable resource in times of need. The powerful Jackery Explorer 2000 Pro is an excellent option if you need to charge a lot of appliances. With 200W solar panels, it just takes two hours to charge fully. Temperature core detectors in the lithium-ion battery and the two chips guarantee secure charging. Additionally, this power source produces 53 decibels to ensure quiet charging.

- **Jackery Explorer 1500**: The Jackery Explorer 1500 is suitable for running heavy power equipment, electric microwave ovens, or air conditioners. It has a 30% energy efficiency rating and can run seven devices simultaneously. This power station has a battery management mechanism to ensure it functions securely. You can effortlessly operate your appliances thanks to the one-button design.

- **Jackery Explorer 1000 Pro**: The Jackery Explorer 1000 Pro can come to your rescue if you’re on a tight budget. It is more portable and lighter, making it ideal for off-grid survival. Additionally, the LED light ensures your outdoor safety while the pure sine wave inverter safeguards your equipment. Not only that, but the twin 100W rapid charge supplies consistent power to gadgets like drones, iPads, phones, and cameras. Additionally, you can select AC ports, A-ports, C-ports, or DC carports based on your demands. You’ll appreciate the simple-to-read screen that displays input/output and available reserves.
