HOW TO USE
Before using Revive, disconnect the metal roller from the handle and place it in the freezer for at least four hours. After making sure your skin is completely clean, reattach the roller and gently glide it back and forth over your skin. Roll gently, applying only light pressure and taking special care when using it under your eyes.

HOW TO CLEAN
To clean your roller, apply rubbing alcohol to the metal head using a cotton ball or cloth. We recommend cleaning it after every use and that you store it in the freezer between uses.
