

# POWER TUBE ASSEMBLY

## CHAIN METHOD

1. Hang fan as specified on HV (ceiling suspended) assembly instructions.
2. Grommets on top edge of tube are spaced 30 inches. Not every grommet will be used. We recommend use of about every 3rd grommet, depending on availability of hanging structures.
3. Attach chains to ceiling joist or other solid structure about every 7.5 ft. Let them hang down temporarily. Mark the chains as you hang them to insure accuracy of hanging height. Secure them with nuts and bolts.
4. Attach power tube to chains.
5. Attach fan to tube with drawstring.

## CABLE METHOD

1. Attach cable between 2 solid points. Use cable puller and turn buckles to tighten.
2. Connect power tube to cable with S-hooks.
