#5275260 "Wet" Boom Assembly

After Spraying

After use, fill the sprayer tank part way with water. Start the sprayer, and allow the clear water to be pumped through the plumbing system and out through the spray nozzles.

Refill the tank about half full with plain water and use FIMCO Tank Neutralizer and Cleaner, and repeat cleaning instructions above.

Flush the entire sprayer with the neutralizing/cleaning agent, then flush out one more time with plain water. Follow the chemical manufacturer's disposal instructions of all wash or rinsing water.

For the boom, (if applicable) remove the tips and screens from the nozzle assemblies. Wash these items out thoroughly. Blow the orifice clean and dry. If the orifice remains clogged, clean it with a fine bristle (NOT WIRE) brush, or with a toothpick. Do not damage the orifice. Water rinse and dry the tips before storing.

Winter Storage

Drain all water out of your sprayer, paying special attention to the pump, handgun, and valve(s). These items are especially prone to damage from chemicals and freezing weather.

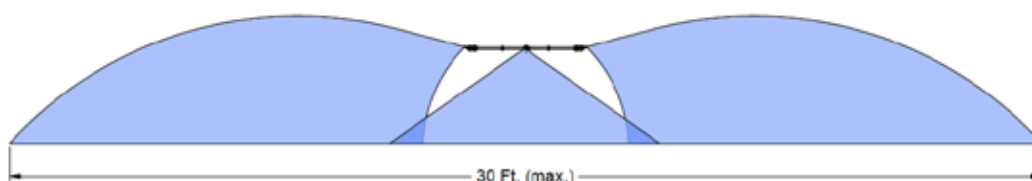

The sprayer should be winterized before storage by pumping a solution of RV antifreeze through the entire plumbing system. This antifreeze solution should remain in the plumbing system during the winter months. When spring time comes and you are preparing your sprayer for the spray season, rinse the entire plumbing system out, clearing the lines of the antifreeze solution. Proper care and maintenance will prolong the life of your sprayer.

WARNING: Some chemicals will damage the pump valves if allowed to soak untreated for a length of time! ALWAYS flush the pump as instructed after each use.

SprayRider™

Designed and engineered specifically for the ATV, SprayRider™ features unique safety features such as low centre of gravity and internal tank baffles dramatically reduce the destabilising effect of liquid surge while the ATV is in motion. Patented valves eliminate the underbody balance hose but preserve the unique C-Dax feature of total evacuation of tank contents on all terrain. A two litre on-board fresh water tank provides a handy reservoir to rinse hands on the SprayRider™ 50 & 80, and doubles as a hose storage feature, while the robust lance with adjustable nozzle caters for a range of different jobs.

The convenient handlebar mounted on/off switch allows for ease of use and increases operator safety.

Front or rear mounting alternatives for SprayRider™ 50 & 80 (depending on bike) ensure that more control can be exercised over the critical consideration of weight distribution, while the Dual Tank Kit allows increased carrying capacity without compromising stability.

- 1** New generation tank design fits more ATV's than ever before
- 2** Robust spray lance with adjustable nozzle to cater for different jobs
- 3** Two litre on-board fresh water tank provides a reservoir to rinse hands and doubles as a hose storage feature

- 6** Low centre of gravity for enhanced operator safety
- 7** Quarter turn lid reduces the likelihood of chemical leakage
- 8** On-demand 12-volt positive displacement diaphragm pump
- 9** Pump cover protects electrics
- 10** Multiple filters minimise nozzle blockages

Spray-On 200

The Spray-On 200 showcases the latest in Generation 2 styling and design innovations at a price you can afford. Whether you need a spot sprayer, flatdeck or boom sprayer, the Spray-On 200 has the flexibility to suit your requirements.

Trailed sprayers are subject to various forces generated by the dynamic effect of liquid in motion. These forces need to be isolated at the trailer and not transferred to the vehicle. To ensure the stability of the vehicle is not compromised, the Spray-On 200 trailed is well balanced, in proportion and has a low centre of gravity. The single axle is robust in construction and individually sprung to minimise shock transfer to the vehicle. As trailed sprayers are often used when conditions are too wet to permit access with heavier equipment, the Spray-On 200 trailed is fitted with mudguards as standard.

The uniquely designed shape of the Spray-On 200 ensures that it can perform well in a flat deck situation, remaining stable and withstanding the rigours of intensive use while remaining lightweight and easy to handle to ensure the tank is readily transportable.

An easily accessible moulded two litre fresh water handwash tank will help you to clean up after spraying.

Spray-On 400

The C-Dax Spray-On 400 is available as a flatdeck or trailed sprayer and comes as a 12-volt or high pressure engine driven pump configuration. The modular design means that there is a Spray-On 400 flexible solution to your spraying requirements.

Trailed sprayers are subject to various forces generated by the dynamic effect of liquid in motion. These forces need to be isolated at the trailer and not transferred to the vehicle. To ensure the stability of the vehicle is not compromised, the Spray-On 400 trailed is well balanced, in proportion and has a low centre of gravity. The single axle is robust in construction and individually sprung to minimise shock transfer to the vehicle. Eliminator Weed Wiper

The C-Dax Eliminator trailed weed wiper dramatically reduces damage to your pasture by putting chemical on the weeds rather than the whole pasture. Quality C-Dax construction means an extremely robust, trailed weed wiper designed to control weeds while preserving pasture. The electronic chemical flow controller allows operators to quickly adjust the amount of chemical being pumped to the wiping carpets to suit the level of infestation. A pressurised feed system ensures equal amounts of chemical are pumped to either side of the wiper regardless of the angle of operation.

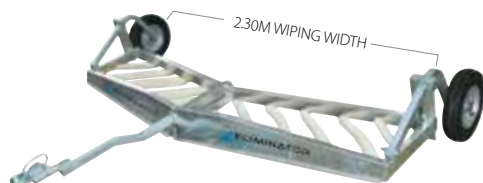

The new Winged Eliminator gives an impressive overall width of 4.30m to save you even more time and allows easy control of weeds on banks and edges of waterways without the risk of runoff or spraydrift.

SPECIFICATIONS:

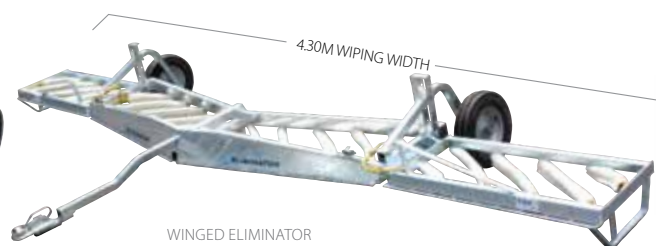

- Wiping width: Eliminator 2.3m;
Winged Eliminator 4.3m
- Self-angling wings with dual or independent left and right wing operation
- Application rates between 3.9–40.2L/ha
- Four height settings, from 85–385mm (approx)
- Floating wings sledge height on ends 150mm
- Angled woollen wiper arms for maximum contact and efficiency

Controlled Droplet Application (CDA)

Pioneered in New Zealand by C-Dax Ltd, CDA technology works by eliminating the large droplets, which contain the most chemical and are prone to “run-off” and exercising similar control over finer droplets which are prone to drift, Controlled Droplet Application (CDA) enables farmers and growers to cover a vastly greater area with smaller tank capacity, thereby vastly reducing fill and mix times.

From an environmental perspective, CDA offers the advantage of reducing ground contamination and spray drift.

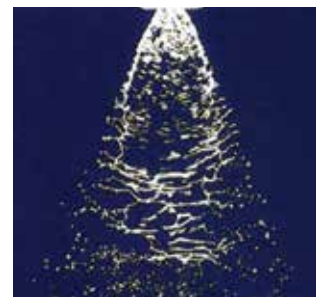

Many farmers and growers who have used CDA for a number of years observe that they are able to maintain improved control because CDA offers a larger “spraying-window” than conventional pressure nozzle technology.

Research reports suggest strongly that there is an optimum droplet size for spraying. CDA generates droplets which fall almost entirely within the ideal spectrum for optimum cover, while limiting run-off and spray drift.

Each CDA “Rotary Atomiser” can be adjusted to generate an optimum droplet size for the task being undertaken at the time. Reliable and low maintenance, CDA will provide your farming operation with increased efficiency and effective use of chemical.

b. Subject to the provision of clause 1. e. COMPANY PRICE LISTS ARE ALL EXCLUDED OF VAT.
