* TESTING OF LIVESTOCK WATER QUALITY

Background Farm animals can consume from two to five times as much water as dry matter. It is therefore important that the source of that water is pure and free from chemical contamination. A comprehensive water analysis will indicate its suitability for livestock use.

Sampling Use a clean 16 ounce plastic container. Allow the water tap to run for at least 5 minutes to clear the lines. Rinse the bottle before the sample is collected. Fill the container to the top and refrigerate if not shipped immediately.

Testing **W1 - Livestock Water Quality Package** - pH, Conductivity, Total Dissolved Solids, Nitrate-Nitrogen, Sulfate-Sulfur, Chloride, Sodium, Calcium, Magnesium, Iron, Manganese.

Other analyses available - please inquire

Interpretation Please refer to our Fact Sheet titled *Interpreting Livestock Water Analysis*.
