- Waterproof
- Rechargeable batteries

INCLUDED

- 3 filters (red, green, blue)
- Recharger
- Two rechargeable batteries
- Weapons mount and pressure pad

The Sightmark H2000 Tactical Flashlight features Cree® LEDs to provide 2000 lumens of light for the most difficult shots or furthest point in the dark of night. The H2000 Triple Duty Flashlight is constructed with Type II mil-spec anodizing aircraft grade aluminum for durability and protection against corrosion.

The Sightmark H2000 Tactical Flashlight is equipped with two rechargeable batteries, a battery recharger, a weapon mount, on/off push button, pressure switch, and three color filters.

Green filters assist in map reading and provide the best visibility in a forest or jungle setting, while red filters help to preserve night vision and assist with varmint hunting, so hunters can avoid being detected by their prey. Red light filters also assist users with reading maps in low light conditions without leaving a "white light" signature. Blue filters are ideal for varmint hunting applications, as they assist in illuminating blood trails.

This product is recoil resistant, waterproof, lightweight and protected by Sightmark's limited lifetime warranty. This is the perfect addition to the award winning Triple Duty Series- shooting, hunting, tactical as well as for camping, hiking, home use and vehicle emergencies. Sightmark-Make Your Mark!
