

Ledger Nano S

Cryptocurrency hardware wallet

STATE OF THE ART SECURITY

Your private keys is protected within a secure chip locked by a PIN code, the same chip than the one used for passports and credit cards.

MULTICURRENCY

25+ cryptocurrencies supported, including Bitcoin, Ethereum, Ripple and Altcoins. Manage multiple assets with the same hardware wallet.

SIMPLICITY

The device is controlled by only 2 buttons, and all actions can be verified on its screen. Easily manage your crypto transactions.

BACK UP AND RESTORE

Your crypto assets stay secure even if you lose your Ledger Nano S: your account(s) can easily be restored on any Ledger device.

Ledger Nano S

Cryptocurrency hardware wallet

Ledger Nano S is a multicurrency hardware wallet, based on robust safety features to store cryptographic assets and to secure digital payments. When you own cryptocurrencies, you need to protect your private keys against unauthorized usage. Ledger Nano S keeps your critical information in full isolation within a state-of-the-art secure element, locked by a PIN code. Transactions are physically verified on the embedded screen and can't be tampered with.

SECURE ELEMENT

Ledger Nano S is based on a dual chip architecture (ST31 CC EAL5+, STM32). The firmware integrity is guaranteed by cryptographic attestation.

MALWARE PROOF

Initialization or restoration of your configuration is performed within the secure environment. Your private keys are never exposed to the outside world.

PIN CODE

Ledger Nano S ensures only you can access your accounts by requiring a 4 to 8 digits PIN every time you use it.

PRIVACY

Your private keys are never held or known by Ledger or a third party: they are hard locked in the secure element.

BEST SELLING

Ledger Nano S has sold more than 1,200,000 units in 165 countries

OPEN SOURCE

All apps are open source, install new ones from Ledger, third party developers, or build your own

ROBUST

Very resistant, compact and portable device, coming with a 2 years warranty
