USE OF TEMPLATE

This Asbestos Management Plan (AMP) template has been designed for customisation to your company and project needs. It outlines the framework of an AMP. The format of the template includes:

- suggested wording where possible to ensure inclusion of important elements and reduce time spent on preparing the AMP;
- words in red font which are guidance to the type of information related to your company and the project that needs to be included in that section; and
- guidance note boxes in green font which provide further explanation and suggestions on the type of information and level of detail to be included.

All text in red should be replaced with your company and project related information. All green guidance notes and this text box should be deleted prior to finalising your document.

GUIDANCE NOTE

Modify this template to suit your business. Delete all text boxes and guidance notes once you have customised this template to suit your needs. To update the Table of Contents above, hover above anywhere on the table with your mouse and right click. Then select “Update Field” followed by whichever option best suits your needs (update entire table or page numbers only).

1 INTRODUCTION

1.1 Background and Statutory Requirements

Asbestos comprises highly toxic, naturally occurring silicate minerals found in the surface of the earth, which have been extensively used commercially in the construction industry. Asbestos Containing Material or ACM is now a prohibited substance as it can cause a range of lung diseases that are often slow to develop but in many cases are deadly.

CompanyName is committed to the safety of all workers and members of the public who may be exposed to ACM due to the work we carry out on this worksite.

This Asbestos Management Plan (AMP) details how the asbestos management requirements for **ProjectTitle** will be implemented and managed on site by **CompanyName**.

The aim of the AMP is to ensure that health and safety risks associated with the project are properly managed. The following Legislation, Regulations and Codes of Practice have been used in the preparation of this AMP:

- Model Work Health and Safety Act;
- Model Work Health and Safety Regulations;
- Safe Work Australia Code of Practice - How to Manage and Control Asbestos in the Workplace
- Safe Work Australia Code of Practice - How to Safely Remove Asbestos
- Safe Work Australia Code of Practice - How to Manage Work Health and Safety Risks
- Safe Work Australia Code of Practice - Managing the Work Environment and Facilities

GUIDANCE NOTE

If asbestos or Asbestos Containing Material (ACM) is identified in a workplace and demolition or refurbishment work is to be carried out, the asbestos or ACM must be removed before the work starts if it is likely to be disturbed. If other maintenance or service work is to be carried out at the workplace, removal of asbestos should be considered as a control measure. Where removal is not reasonably practicable, other control measures must be implemented to minimise exposure, including encapsulation or sealing.
