## DESIGNERS SERIE ANTI GLARE POT LIGHTS

Timeless finishes include gunmetal, polished chrome, bronze, and matt black and white. This product comes in multiple trim and trim-less styles. It has a simple yet luxurious feel, designed to work harmoniously with many design ideas. It gives a functional yet ambient glow to adjustable, low-glare spotlights for precise task illumination. IP65 is rated, so it's safe for wet zones, whether you need a splashproof light for general use or higher protection over a shower or bath.

## MAGNETIC TRACK MODULAR LED LIGHTING SYSTEM

As part of the C&C minimalistic lighting series, the magnetic track system with LED modular lighting further blends the boundary between trendy style and practical function. Providing architects and designers a solution for minimizing space while maximizing desired lighting effects. Cutting-edge LED lighting control technology offers total control of colour temperatures adjustable between 2700k-6000k and 0-10v dimming.

2 styles of 48v magnetized track and 4 ways of installation made possible by various accessories. High flexible in installation while maintaining consistency in style.

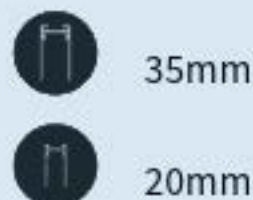

5 styles of ultra-slim tracks to extend the application possibilities, such as solid ceilings, decorative walls and cabinetry. Universal led lighting module compatible with C&C lighting standard magnetic track system and power supply in 48v. Keeping a consistent minimalistic interior style.

**LED STRIP/SHEET LIGHTS**

LED tape lights need no introduction throughout years of testing and tens of thousands of LED strips sold. Responses and feedback from customers have led to our current line of LED strip lights and accessories for the most reliable and variety of applications. We have streamlined our products to only non-pixelated LED strips in white and rgb+white. It works with various aluminum channels for different applications. Uncovered indoor strips are for most indoor applications, and outdoor IP67 neon strips are available for waterproof needs.

The LED chip has improved from the 5050, which creates pixelation, to the much smoother 2835 strips which provides the benefit of colour, low heat output and longevity. The new continuous cob strip has further perfected the effect of smoother lighting. LED Strip Light used in an Aluminum Profile that is recessed to drywall

One of our current favourite products is a pixel-free COB LED strip that can be cut every 8mm compared to every 24mm section on the market.

COB STRIP 3000K 5M 24V  
COB STRIP 4000K 5M 24V

## L-STYLE 2 WIRE TRACK LIGHTING SYSTEM

C&C Lighting's LED Track Lights are a highly sought-after lighting solution for both residential and commercial spaces, including homes, apartments, as well as various commercial and industrial settings. The standout feature of track lights lies in their adjustable design, enabling them to be easily directed in any desired direction. One of the notable advantages of track lighting is its versatility, as it can be inserted into any position along the track that supports it, without being limited to specific sockets or lamp holders. The convenience is further enhanced by the built-in conductors along the entire length of the track, eliminating the need for rewiring.

## HIGH BAY AND LOW BAY LIGHTS

LED High Bay Lights are specifically designed to illuminate areas with ceilings exceeding 20 feet in height, reaching approximately 40 feet. These lights require specially engineered reflectors for HPS/MH bulbs or lens angles for LED high bays to ensure optimal performance at such heights. These features are essential for achieving efficient lighting and maximizing the light distribution in high-ceiling spaces. Low Bay lights accomplish the same results for lower ceiling height applications. They come in regular and vapour-tight options. We also offer LED retrofits if you want a quick and affordable upgrade to your industrial lighting.
