

S12T TINY GPS SPLITTER

1x2 Tiny GPS Splitter

DESCRIPTION

The S12T Tiny GPS Splitter is a one-input, two-output GPS splitter device in which input from an active GPS antenna is split evenly between two receiving GPS units. Ideal for platforms requiring very small, lightweight, and/or low-power equipment (i.e. Unmanned Aerial Vehicle, UAV). The S12T can be configured to pass DC from an RF output (J1) to the antenna input port in order to power an active GPS antenna on that port. The second RF output (OUT2 (J2)) is DC blocked and features a 200Ω resistive load to ground to simulate an antenna current draw for any receiver connected to that port.
