

Make GPS Work Inside Any Small Aircraft

GLI-DIAMONDBACK

GLI-DIAMONDBACK provides GPS coverage within the cargo compartment of any small sized military aircraft. This means any handheld military or commercial GPS receivers, precision air drop guidance units and precision airborne receivers acquire satellite signals inside the cargo compartment. There are no delays in acquiring a GPS position. A GPS receiver will experience no loss in signal coverage as it moves out of an aircraft equipped with **GPS Live Inside**.

- Equipment has received Safety of Flight Approval from the USAF Air Mobility Command Systems Group
- Based on state of the art technology developed for Boeing C-17
- Supports options not available in any other repeater
- Outperforms retransmission systems costing several thousand dollars more.

Precision Airborne Missions can immediately deploy with no delay in GPS acquisition.

Provides GPS Signal for These Apps and More. . .

- Toughbook Computer
- DAGR
- FalconView
- TacticomPM
- Parachutists NavAid
- JPADS AGU & Dropsonde
- Compatible with Garmin Fortrex, Garmin 60, Magellan Triton or *any* Commercial GPS Receivers

GLI-Echo II LRU

Warfighter Has No Need to Compromise on Performance

- 100% GPS signal compatible with *all* military and commercial receivers, regardless of complexity
- No interference with onboard avionics equipment
- JPADS/MFF receivers will exhibit continuous GPS signal reception throughout the deployment
- Combat Proven Core Technology - Highly reliable system that supports demanding combat operations
- Waterproof & EMI Sealed - Built for extreme mission environments
- 28V aircraft power or battery power options
- LED's on hardware and NVG compatible - Easy to recognize that system is operational
- Engineered for easy installation and operation, (including a pictorial user manual) - Missions stay on schedule!
- Built to military specifications: MIL-STD-810G, MIL-STD-461F (CE 102, CE106, RF 102), MIL-DTL-5541, MIL-STD-704F OR MIL-STD-1275B
