

GNSS-3SA

GNSS Active Antenna

KEY FEATURES

- Military and Civilian Applications
- GNSS Bands: GPS L1, L2; GLONASS L1, L2 and L3; GALILEO E1, E5b
- Waterproof
- Excellent gain
- Small Form Factor
- Integrated Resistor for Antenna/Coaxial Cable BIT
- Side Mount

Automated Built In Test (BIT)

The GNSS Antenna includes BIT. The antenna can monitor the DC voltage on the center conductor to determine the status of the cable and antenna connection.

DURABLE, HI PRECISION, BUILT TO LAST

The GNSS active antenna from GPS Source is built for long term reliability. The antenna is small and lightweight, with exceptional protection against the elements. It is suitable for manpack, ground, marine, aircraft, and space applications, multiple GPS devices and operating platforms.

Designed to future proof your investment, the portable, yet precise GNSS antenna will receive GPS, GLONASS and future Galileo signal. The ruggedized antenna, engineered with weather resistant materials, protects the antenna from UV, rain and lightning strikes, chemical and jet fuels - making it an ideal investment for long term use.
