new perspectives on scandinavian design

Muuto is rooted in the Scandinavian design tradition characterized by enduring aesthetics, functionality, craftsmanship and an honest expression. By expanding this heritage with forward-looking materials, techniques and bold creative thinking, our ambition is to deliver new perspectives on Scandinavian design.

In fact our name, Muuto, comes from muutos, meaning new perspective in Finnish. We handpick leading contemporary designers who are strong interpreters of our philosophy and combine their talents with the passionate Muuto creative team.

You will know our design because it has muutos: objects made sublime through new perspectives, enjoyed across the world, representing the best of Scandinavian design today.

Before we introduce a new Muuto design, we want to be sure that it adds a new perspective, building on a strong heritage but in a modern context—somehow improving or challenging what has been made before.

We search for designers who share our mindset. Creatives with a contemporary take on tradition who embrace the essence of Scandinavian design.

We aim to create designs that are inviting and intuitively attractive. We hope our perspectives on Scandinavian designs will inspire you to reflect on your surroundings and how they make you feel.

a space that feels just right

How can design trigger emotion and why do we gravitate towards one space over another?

It's these types of questions that drive our dedication to creating new design, as we hope our perspectives will make you reflect on what makes a space feel just right.

Our interiors are landscapes for authentic and analogue experiences. Our homes are filled with objects that stimulate the senses. Colors that evoke memories and emotions. Materials that trigger feelings. Shapes that tap into our subconscious. Objects influence our impression of space and how we feel when in the presence of them.

Of course, our perceptions of design are subjective. An object can have a clear personality and convey multiple messages, depending on the receiver. It could be a small detail you find endearing. A fabric you like to run your fingers over. The sound a lamp makes when switched on. Or the color of a sofa that soothes you. We each experience designs in our own ways and its colors, shapes, materials and tactility affect how we interpret our surroundings.

It's All About Perspectives

Our name Muuto comes from the Finnish word *muutos*, meaning new perspective. Drawing on our Scandinavian roots, we create functional, well-crafted pieces with an enduring aesthetic and an honest expression. Before we introduce a new Muuto design, we want to be sure that it adds a new perspective, building on a strong heritage but in a modern context—somehow improving or challenging what has been made before.

We search for designers who share this same mindset. Creatives with a contemporary take on tradition, who embrace the essence of Scandinavian design. Who are keen on exploring a forward-thinking approach to natural materials, comfort, craftsmanship and durability. Individuals who bring a fresh set of eyes to creating something new, as well as new ways of reimagining something old.

People tend to gravitate towards something that feels familiar yet new. We aim to create designs that are inviting and intuitively attractive. Designs should spark curiosity and interest—without imposing itself on its surroundings. Because a chair in one interior can seem soft and elegant, whereas in another interior it can look contemporary and edgy. It's all about perspectives.

More Than Merely Design

For a design to have character, it involves details that resonate with us on a deeper level, which results in an object with presence. Able to set the scene for dining and socializing. A more focused atmosphere for working. Or a sense of well-being for relaxing.

Everybody knows the feeling of entering a room that feels good. We hope our perspectives on Scandinavian designs will inspire you to reflect on your surroundings and how they make you feel. To create a space that feels just right. •

Referencing architectural shapes, the Outline Sofa adds new perspectives to the classic Scandinavian design sofas of the 1960's, marrying the ideals of *simplicity* and *function*.

“Relevo means relief in Latin, emblematic of the rug’s *geometric pattern*, made by trimming the *hand tufted* rug in levels and thereby creating a subtle effect of light and shadow.”

— Studiopepe

inside with— turbina studio, *Barcelona*

Post Floor Lamp p. 138
Ridge Vase p. 146

Turbina Studio is an artistic practice founded in 2018 by Mateo Fumero and Minerva Capdevila. It is primarily concerned with the perception of time, space and the cosmos: through its exploration of materials and objects, it reflects on life's transcendental questions, reframing the earthly experience of the unknown. Mateo and Minerva live together with their young daughter, Rita, in an old dry cleaners in Sants, Barcelona, where home and work co-exist in perfectly unstructured fluidity—almost all of the time.

Post Floor Lamp p. 138
Stacked Storage System p. 124

The home of artists Mateo Fumero and Minerva Capdevila, co-founders of Turbina Studio, is defined by its fluidity. The pair, partners in life and work, are based in a former dry cleaner in Sants, Barcelona.

There, they live in a warm, raw, textural space with a neutral palette, lots of lush green plants, and an ever-evolving collection of objects. The open-plan living area they share with their three-year-old daughter, Rita, is connected to their workspace—a large, open room full of machinery, objects and material archives—allowing the artists to step seamlessly between home and work, life and art. From hour to hour, day to day, their young family eludes regularity and routine. Instead, their time is ruled by how they feel, what they need in the moment, and how much longer one of their newly created sculptures might need to dry in the studio, before they can resume work on it. It's an unconventional way of life, and their space has evolved to accommodate it. Except, that is, in the kitchen-cum-dining area, which is configured around a simple, elegant table and accompanying bench. Overhead, the skylight provides a direct connection to the sun, the moon and the cosmos, which play such an elemental role in the studio's practice. (Turbina, whose name refers to the idea "*of generating things, of transforming energy, or being in continuous motion*", is driven by the duo's interest in the universe, the planets and their orbits, space and time.) But Mateo, Minerva and Rita spend much of their time in this family space, cooking nourishing meals for lunch and dinner. The living space is, if you like, the axis on which the whole home turns.

Elsewhere, they display their treasures—remnants of past projects, industrial processes, organic rocks or pleasing found objects. They play, they reflect, they exist together. They continue to grow the space itself—the outside terrace, currently a space for messy work, is very much a work in progress, and they are also planning a room for Rita, for the future. If Turbina's work explores the perception of time and space through sculptural works, then it's from this base that their ideas originate. Fluidly, organically. At their own pace.

What drew you to the neighbourhood you live in?

Sants was a small industrial town adjacent to Barcelona before the city grew. Many of the old factory buildings are still here, although they have other uses now—they are no longer industrial. You can feel the history of the neighbourhood in many small workshops that served these large factories, and the beautiful old houses that still remain, as well as the lively working class spirit that is still present here.

Are there any spaces that inspired you, when you were creating this one?

We lived for several years in self-managed and artistic co-existence projects. Large spaces in industrial buildings always with an integrated workshop. Unfortunately we do not have that kind of a space now, but we have taken into account the importance of the place itself, and how much it conditions the type of life that is done in it. We are interested in provisional and unspecific spaces, so as not to create rigidity.

Workshop Chair p. 97
Beam Table Lamp p. 135

From hour to hour, day to day, their young family eludes regularity and routine. Instead, their time is ruled by how they feel, what they need in the moment, and how much longer one of their newly created sculptures might need to dry in the studio, before they can resume work on it.

How do you approach designing your home?

In some ways, the house project started, and has been growing in parallel with, our artistic project. The fact that the process has been so slow—there are still unfinished parts—has given us time to live in the space, reflect and change when necessary. We have learned from it, and in some ways it has been a testing ground. We did most of the renovation work and furnishings ourselves, as we moved into the space. Of course, it also adapts to the growth of our daughter Rita, as different needs arise at each stage of her life.

Where do you spend most of your time here?

The living room-kitchen is the most versatile space in the house. It is also the brightest, so we use it for various workshop tasks, and for photography. It is the space where we spend the most time: we play, cook, eat, receive visitors and meet.

Are there any smells that make you feel at home?

The smell of wood from the workshop, or the smell of good homemade food.

What about sounds?

That would be the silence, or the rehearsals of Lucía, Mateo's sister who lives upstairs, and is a musician. We are lucky not to feel like we are in a city.

What do you see when you look out of your windows?

We only see the sky, and sometimes a flying cat. Much of the living room ceiling is made of glass on which Tofu, Lucía's cat, sometimes lies.

Your home and workshop are attached. How do you divide your work life and your home life?

Our way of working is not very conventional, we don't have a very clear schedule or routine. We organise ourselves daily as much as possible, and adapt to the rhythms set by our daughter, Rita. We'll work for a few hours, then take advantage of

the drying times to do something with the little one, then go back to work... We're not very fond of the idea of the weekend; instead, we try to organise ourselves and make the most of the flexibility that working on our own allows. We have gone through stages in which we worked intensely when Rita slept, for example. Now it is easier for us to combine with her: we take turns, we divide ourselves... For the moment, we love this rhythm. We hope to be able to maintain it over time.

What kinds of materials are you drawn to?

The materials of traditional construction are undoubtedly the ones that interest us the most: stone, terracotta, lime mortar, wood. We like to talk about the language of materials; we understand that each material has its own implicit, ancient symbology, somehow inscribed in our collective unconscious. In this way, materials act as symbols, clues or triggers about the whole set of ideas they contain. In fact, the material itself is the starting point of many of our projects.

What do you collect?

We collect a lot of objects from nature when we travel. We have a special fixation on stones and geology. But we also have all kinds of things! Industrial and mechanical pieces, objects that catch our attention because of their color, texture, material, deterioration... what we call "selected junk" and we accumulate in various boxes that we call "boxes of wonders", that we use for our still lives.

Do you live with anything that you have made?

We dedicate a lot of time to each of the pieces, so we establish a very close bond with them. We take them from one place to another and find a place for them, so that we can see them every day and in different situations.

What does 'home' mean to you?

Wow, that's a difficult one. We would quote a text by Bachelard, in answer to this: *"The house is our corner of the world; it is, as has been said, our first universe. It is really a cosmos. The house, like fire, like water, allows us to evoke gleams of reverie that illuminate the synthesis of immemorial and memory. The house shelters the reverie, protects the dreamer. The house allows us to dream in peace. The house is the first world of being. Before being launched into the world, man is deposited in the cradle of the house. And always in our dreams the house is a great cradle."* •

nicholas
pourfard,
San Diego

Post Floor Lamp p. 138

Enfold Sideboard p. 127
Post Floor Lamp p. 138

“I have a pretty bad chair collection habit. I have a lot of chairs. Some people's work really resonates with me, and I love to have part of their ideas in my space.”

Nicholas Bijan Pourfard is a luthier and furniture maker based in southern California. He lives in Escondido, in a home designed by Modernist architect and industrial designer Walter S. White, where he is sensitively restoring some of the building's original features.

Nicholas Bijan Pourfard is not very good at sitting still. In his home in Escondido, at the southernmost tip of California, the luthier and furniture maker is just putting the finishing touches to a bookcase he built for the space, which he moved into a little over a year ago. And it's not just any space: designed by architect and industrial designer Walter S. White, the building is considered a love letter to Modernist architecture, pinned to mood boards the world over. It's lucky, then, to have found a new inhabitant in Pourfard.

His sensitivity in restoring the home's special details is mirrored in the intuitive way he has designed its interior, populating it with chairs by designers he admires, antique rugs from his father's Persian rug store, and the odd custom piece built in his workshop, too. The open-plan layout is all warm white walls, honeyed light and organic materials—Nicholas will choose forms and textures based on what he sees, and what's missing. But underpinning his slow, steady approach is a rigorously honed eye—one attuned by years of creating instruments from reclaimed skateboard decks, and process-driven experiments with furniture-making.

None of which would have started at all, Pourfard explains, if it hadn't been for an ill-timed accident that kept the student from his skateboard for some six months. Then, as now, he was happy to find that wood could keep him busy.

What's it like living in San Diego?

Los Angeles is the hip place. Everyone's stylish and knows what's cool. In San Diego, we don't really have that. I live in Escondido, more of a rural farm area. It gets hot here, up to 90, 100, in the summers. It's almost a desert, but it's really easy to farm here. I can grow just about anything in this climate: mangoes, figs, cactus fruits, dragon fruits, peaches, guava, everything. The plants evoke a lot of passion for me.

My weekend getaways are to Palm Springs, Los Angeles, Mexico—I can get to Mexico in 20 minutes. San Diego's community crossover is probably the thing that makes it the most unique. I have friends that live in Mexico and come to work here, or who I hang out with there on the weekends. We have our own design community here, and it's truly international. I used to live in San Francisco and New York, and that kind of energy is addictive and contagious. So I do miss that a little bit. But being in my bubble here and having so much space to create and focus, I can free myself.

Tell me about your home.

I live in an architecturally significant house. It was designed by Walter S. White, who designed the Wave House in Palm Springs, which is essentially a museum home. I've been pouring hours of work into the interior, because the bones of it are great. There are super cool little details that are part of how the house itself was made, but it wasn't kept very well. So I'm doing all that detailed work, bringing it back.

What is your favorite thing about having a garden? How does this outside area complement your home's interior?

I really think being in the garden has become the greatest way of spending time in my life. I have always been attracted to farm culture and my father has a four-acre orchard of every fruit you can imagine. I always loved seeing how every part of the yard can grow into itself and with my encouragement become something truly amazing.

I am in the beginning stages of my yard, but I feel like every day more of a master plan is developing. I specifically think that the outside of a home carries a great influence on how you perceive the inside of one.

How did you first start working with wood and where did you go from there?

When I was 18 I hurt my ankle skating, and it was a super long recovery—six months. While I was recovering, I took all my old skateboards, and the jigsaw that I had, and I started cutting them and glueing them and doing all these crazy experiments.

I did play guitar at the time, and I thought, how cool would it be if I could make a guitar? I was just gonna go buy wood. But I'm 18. I don't have very much money. I thought, what if I made it out of skateboards, somehow? I was about halfway done when I realised, this is gonna work! So I started making two more.

I kept making them. At the same time I worked for free as a cabinet-maker, to learn more woodworking, then I worked for free painting guitars. Then the craziest thing happened. A guy at college was in a video film class, and filmed me making guitars and we put it on YouTube. I thought, wow, 5,000 people watched this! Then I went to bed and woke up and someone had picked it up, and it got something like 30 million views. It went insane after that, and I started selling guitars all over the world through Prisma Guitars.

Is there anything you collect?

I have a pretty bad chair collection habit. I have a lot of chairs. Some people's work really resonates with me, and I love to have part of their ideas in my space. If everything was something I made, it would be really flat, you know?

What's your favourite time of day in the house?

Right when I wake up and I see the sun hit everything, I really see the magic of it all. Those are probably the most productive moments of my day. I'm not emailing, but my brain feels active. That's the moment when my brain thinks of the next idea. •

our sustainable perspectives

At Muuto, we aim to take responsibility for our operations and reflect on the choices we make and how our priorities affect the wellbeing of people and the environment. From the materials we select to the partners we work with, the independent institutes we test and certify our products through, and all the way down to our packaging. Our approach is based on knowledge and staying curious. With each new advancement in the field and as new research emerge, we keep searching for new perspectives on sustainability across all our operations. *Listening. Learning. And improving.*

By switching to recycled plastic, we expect to reduce our use of virgin plastic by more than 80 tons per year.

Fiber Side Chair Tube Base p. 92
Soft Side Table p. 118
Sketch Toolbox p. 144
Dots Wood Coat Hooks p. 142

It Starts With Enduring Designs

Long-Lasting Products—As a design-driven company, we want our designs to be appealing now—and in the future. Drawing on our Scandinavian heritage, we seek designs with a distinctive character. Reflecting creative thinking that's rooted in functionality and crafted with forward-thinking materials. The result is an enduring aesthetic that defies any trend. Designs that last and that you would like to keep and pass on to the next generation.

Testing is key to longevity. To keep our high quality high, continuous testing is at the core of our development processes. For high levels of strength and stability, our products are certified by independent institutes that are well-respected authorities in the industry.

According to Muuto's general terms of sale and delivery, the warranty is 5 years on all products tested to meet the demanding strength, durability and stability standard, the North American ANSI/BIFMA, and 3 years on all other products.

Reflecting On Materials

Conscious designs—Whenever we develop a new product with our designers, we reflect on the impact it will have on your health, your surroundings and the environment.

We continuously seek new perspectives and work with the best in our industry to learn about new techniques and materials. The search for the right materials is an integral part of our design process and we put great importance on all the materials that comprise a design. From the large components, such as wood and textile, down to recycled materials used in our designs and packaging, we consider a material's origin and life cycle.

Giving New Life To Plastic Waste—The new generation of Fiber Chairs is designed with a conscious perspective in mind and a wish to improve our environmental impact.

The whole Fiber Chair Family, without upholstery, uses a minimum of 80% recycled plastic and FSC™-certified wood fibers (FSC™ C028824).

The Fiber Chair Family is an essential part of our product portfolio and transforming our production of it is an ambitious starting point in becoming more circular in our consumption of raw material. In fact, by switching to recycled plastic, we expect to reduce our use of virgin plastic by more than 80 tons per year.

Reasons To Feel Reassured

Eco labels & certificates—There are numerous types of labels and certificates that address different aspects of sustainability. We have chosen the ones most relevant to you—and our portfolio of products.

In our assortment, you will find a number of products that have obtained the EU Ecolabel Certification. The EU Ecolabel is the European Union's official certification awarded to products for their high quality and sustainable initiatives. The EU Ecolabel is a well-respected certification worldwide as it identifies products having a reduced environmental impact spanning the total lifecycle of a product—from raw material to disposal.

Muuto participates in Declare, a platform based on transparency that lets you see the origins and lifecycle of a product. A selection of our furniture is Living Building Challenge Red List Approved.

Muuto is both an FSC™-certified and PEFC™-certified company. The Forest Stewardship Council™ (FSC) aims to ensure that forests are managed in a sustainable, environmentally responsible manner that preserves the natural surroundings, while also supporting the local community.

Whenever we develop a new product with our designers, we reflect on the impact it will have on your health, your surroundings and the environment.

Around Coffee Table p. 117

The Air We Breathe Indoor

Healthier indoor climates—Without a doubt, the air we breathe is essential for our health. Even for indoor environments, where we spend so much of our time, the air quality is vital to our sense of wellbeing.

In any space and often impossible to see, chemicals are emitted into the air. These emissions come from all kinds of objects in our everyday lives. The type of emissions that can have an adverse effect on our health contain what's called Volatile Organic Compounds (VOCs). In fact, the majority of VOCs can be found at home—in certain types of soaps, perfume and cosmetics, cleaning products and disinfectants, fuel, paint, plastic and the like.

At Muuto, we want our furniture to enhance your surroundings, while at the same time, create healthier indoor climates. That's why we go to great lengths to have our furniture tested. So far, the vast majority of our furniture collection is VOC tested.

Our Work Internally

Our operations—We always consider how our decisions will affect the lives of those around us. That also includes evaluating our internal operations.

Our Danish HQ, offices and warehouses are running on 100% renewable energy. A move that lowers our overall carbon footprint. It's an initiative we are in the process of incorporating in all our Muuto showrooms and flagship stores around the world.

The Danish Company Målbar offers a screening tool that lets us measure our CO₂e-emission per product. By tracking a product's components and their origins it's possible to calculate

the total CO₂e-emission of a product. With our work with the Målbar-tool we are able to listen, learn and improve our operations by taking informed and well-considered choices about the products we bring to the market.

A Shared Responsibility

Our suppliers—As we aim to take responsibility for our operations, we expect and demand the same from our suppliers.

In striving to ensure that our designs are produced using safe techniques, by skilled workers who operate under healthy conditions, we have all our manufacturers sign our Code of Conduct. Our Code of Conduct is aligned with the UN Global Compact of Human Rights and includes principles that respect labor laws, human rights, ethical conduct as well as the environment. Key issues include anti-corruption policies and prohibiting child labor. Because for us, it's essential that our suppliers share the same mindset when it comes to socially responsible practices.

Visit muuto.com/sustainability and learn more about our sustainable perspectives.

Configurator

Customize Your Design

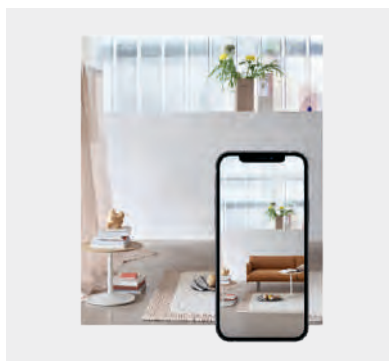

Textile or leather? Full or front upholstery? Green or Grey textile? Legs in Black or Chrome? Making a choice among the nearly infinite Made-To-Order possibilities can seem overwhelming.

Discover our vast selection of configurable designs, marked with a Configurable label, and customize your favorite design in the Product Configurator, exploring more than 100.000 combinations of colors, textile and leather upholsteries across our entire sofa range along with selected chairs and tables.

Make our designs truly yours on muuto.com/configurator.

AR

Try Our Sofas in Your Own Home

Ever wondered how a Muuto sofa would look in your home? With our Augmented Reality tool, you can place our sofas in your own home!

Simply use the configurator to customize your chosen piece by playing around with materials, trying out different colors and perhaps changing the legs. Then proceed to the AR tool to see a movable 3D image of your design in your room.

Visit muuto.com/AR to explore.

Planner

Tailor Your Modular Design

Our range of modular designs offer nearly endless possibilities, allowing you to customize our design to your exact aesthetic and spatial needs.

Visit planner.muuto.com and start planning.

An Extensive Ready-To-Ship Collection

With our extensive Ready-To-Ship collection, many of our designs are available for quick shipping in a broad selection of colors and upholsteries, spanning across furniture, lighting and accessories. Explore all designs on the following pages and on muuto.com.

Availability

Please note that all variants are subject to stock availability and certifications across regions. Please check availability with your local retailer.

Store Locator

Fallen in love with a design? Find your nearest Muuto dealers in our Store Locator on muuto.com/store-locator or visit muuto.com/online-shops for an overview of our online dealers.

Fiber Armchair – Wood Base by Iskos-Berlin

Material

Shell without upholstery is made using minimum 80% recycled plastic. The plastic is mixed with up to 25% FSC™-certified wood fibers. Due to the partly natural material of the shell, slight color variations can occur. Shell with upholstery in an innovative composite of plastic and up to 25% wood fibers. Fully or front upholstered shell with textile or leather. Fully and front upholstered versions with base in solid oak with a water-based lacquer. Non-upholstered versions with base in FSC™-certified solid oak with a water-based lacquer. For Stained Dark Brown version slight color variations can occur. The Fiber Series without upholstery is EU Ecolabel Certified.
