

ALZO HORIZONTAL CAMERA MOUNT (HCM) USER GUIDE AND APPLICATIONS

The ALZO Horizontal Camera Mount consists of a 33" long x 5/8" diameter solid aluminum bar with a universal camera screw on one end and the tripod clamp. The tripod clamp has a thumb screw to allow the camera/bar to be horizontally positioned and rotated.

The ALZO HCM has a grooved end opposite the camera mount end that can be used to hang a counter weight to balance the rig and stabilize the camera. We recommend using a water bottle and string as this allows for easy weight adjustment for perfect balance.

Maximum recommended camera weight is 2 lbs without counter balance. With a counter balance the maximum recommended camera weight is 8 lbs

OVERHEAD PHOTOGRAPHY

The demonstration on the left shows the ALZO HCM mounted to an ALZO Ball Head Tripod over the ALZO 300 Table Top Studio. The HCM is positioning the camera over the ALZO 24" Platform. This combination is perfect for shadowless overhead photography. The camera includes an articulating LCD display for easy image framing.

We recommend using a wireless shutter release when using this equipment for overhead photography.

CAMERA INSIDE A PHOTO TENT

In this Tent product imaging application the ALZO Horizontal Camera Mount allows the camera to shoot overhead inside the imaging Tent. A camera with an articulating LCD viewfinder allows for easy image preview.

In this application a wireless shutter release is essential as it is difficult to access the camera shutter inside the tent.
